

GUIDELINES FOR THE PREPARATION OF REPORTS BY MEMBER STATES ON THE APPLICATION OF THE 1974 RECOMMENDATION CONCERNING EDUCATION FOR INTERNATIONAL UNDERSTANDING, CO-OPERATION AND PEACE AND EDUCATION RELATING TO HUMAN RIGHTS AND FUNDAMENTAL FREEDOMS

I. Introduction

A. About the 1974 Recommendation

1. UNESCO's *1974 Recommendation concerning Education for International Understanding, Co-operation and Peace and Education relating to Human Rights and Fundamental Freedoms*¹ (the "*1974 Recommendation*") aims to promote international education and world peace through understanding, solidarity and cooperation. It was adopted on 19 November 1974 by the General Conference of UNESCO at its 18th session.

2. The *1974 Recommendation* applies to formal, non-formal and informal education and to all levels, from pre-primary to tertiary and adult education and lifelong learning. The General Conference recommended "*that Member States should apply*" the provisions included in the *1974 Recommendation* "*by taking whatever legislative or other steps*" that provide institutional (e.g. policies and legal frameworks) and pedagogical (e.g. curricula, teacher training, educational materials, equipment, and student assessment) support for its implementation, based on the "*objectives*", referred to in paragraph 4 of the *1974 Recommendation*, "*regarded as major guiding principles of education policy*" including: an international dimension and a global perspective on education, cultural diversity, interdependence, communication, rights and responsibilities, international solidarity and cooperation, and problem solving.

3. Today, the principles of the *1974 Recommendation* apply equally well to Education for Sustainable Development (ESD) and to Global Citizenship Education (GCED) and therefore represent a powerful tool for promoting the 2030 Agenda for Sustainable Development and in particular SDG Target 4.7 on the promotion of sustainable development and global citizenship through education, Target 12.8 on access to information on sustainable development and Target 13.3 on climate change education.

4. The General Conference in its 39th session recommended the use of the *1974 Recommendation* reporting process to support the implementation and monitoring of Target 4.7 of Sustainable Development Goal 4 (39 C/Resolution 79). The UNESCO Executive Board at its 209th session approved the use of the current guidelines for both the monitoring of the *1974 Recommendation* and the collection of data needed for the following global SDG indicator for which UNESCO is custodian (209 EX/Decision 18.II):

4.7.1, 12.8.1 and 13.3.1: *The extent to which (i) global citizenship education and (ii) education for sustainable development are mainstreamed in (a) national education policies; (b) curricula; (c) teacher education and (d) student assessment.*

5. Questions marked with an asterisk (*) will be used in the calculation of the respective indicators (**Table 1**). As approved by the Inter-Agency and Expert Group on the SDG Indicators, the indicators will be calculated for primary and secondary education only.

Table 1 Questions used in the calculation of the global SDG indicator for Targets 4.7, 12.8 and 13.3

Policies	Curricula	Teacher education	Student assessment

B. Reporting obligations

6. The General Conference, at its 18th session, when adopting the *1974 Recommendation* recommended “*that Member States submit [...] reports concerning the action taken by them in pursuance of this recommendation*”. Moreover, in accordance with Article VIII of UNESCO’s Constitution “*Each Member State shall submit to the Organization [...] reports [...] on the action taken upon the recommendations and conventions referred to in Article IV, paragraph 4.*”

7. Thus, **all UNESCO Member States are expected to report on the steps they have taken to implement the 1974 Recommendation** preferably by completing the following questionnaire. Such reporting takes place every four years.

II. Guidelines for completion of the questionnaire

8. This questionnaire and its accompanying guidelines are addressed to Ministers responsible for relations with UNESCO. The questionnaire is typically completed by Ministries of Education and other government authorities responsible for education. Responses should cover, as far as possible, education at all levels of government, including sub-national levels where applicable as well as education outside the government sector.

9. National respondents are encouraged to **consult widely** both within, across and beyond government, including with Ministries of Environment, with national human rights institutions, the education sector, civil society partners and others, as necessary, to gather the information needed to complete the questionnaire.

10. Responses to the seventh consultation should cover:

- (i) the time period 2017-2020;
- (ii) education at all levels of formal education from pre-primary to tertiary education as well as non-formal education;
- (iii) all levels of government that have responsibility for education within the country; and
- (iv) where possible, education outside the government sector.

11. To assist countries in responding to this questionnaire, UNESCO has developed the following set of global citizenship education and education for sustainable development themes. The list is based on a review of current common practices in many countries as well as a review of relevant literature. While the terms ESD and GCED may be used differently in some countries, the list of themes typically captures what are seen as key elements of Target 4.7. Please refer to the definitions of key terms in **Section III** before completing the questionnaire.

Global citizenship education and education for sustainable development

- 1. cultural diversity and tolerance
 - 1.1 international or intercultural understanding, solidarity and cooperation
 - 1.2 intercultural and interreligious dialogue
 - 1.3 local, national and/or global citizenship
- 2. gender equality education
 - 2.1 gender-based equal opportunities
 - 2.2 gender equality and justice
 - 2.3 gender roles, identity and stereotypes

3. human rights education
 - 3.1 equality and non-discrimination based on race, colour, language, religion, disability, political or other opinion, national or social origin, birth or other status
 - 3.2 human rights values, human dignity, justice, inclusion and participation
 - 3.3 respect for human rights and fundamental freedoms (as outlined in international conventions and declarations)
4. peace and non-violence
 - 4.1 friendly relations among peoples and nations
 - 4.2 challenging negative stereotypes, promoting peaceful solutions, learning to live together, including others and preventing violent extremism
 - 4.3 preventing all forms of violence including bullying, verbal abuse and gender-based violence
5. climate change education
 - 5.1 mitigation
 - 5.2 adaptation
 - 5.3 impact reduction
 - 5.4 early warning
6. environmental sustainability
 - 6.1 caring for the planet, protecting nature
 - 6.2 environmental justice
 - 6.3 biodiversity, water
7. human survival and well-being
 - 7.1 environmental health as it pertains to human well-being, disaster risk reduction
 - 7.2 health of the planet for future generations
 - 7.3 sustainable cities and communities
8. sustainable consumption and production
 - 8.1 responsible and sustainable lifestyles
 - 8.2 green economy, green jobs
 - 8.3 sustainable energy

III. Definitions of key terms

Term	Definition
Themes of global citizenship and education for sustainable development	
1. Cultural diversity and tolerance	<i>Education about and for diversity including language, ethnicity, race, religion as well as the development of tolerance, mutual respect and appreciation for cultural diversity. It includes intercultural and interreligious dialogue, understanding, solidarity and co-operation, and citizenship education.</i>
2. Gender equality education	<i>Education that addresses the wider issue of gender equality by promoting new attitudes and patterns of belief, transforming the way people think about traditional gender roles and helping to build long-term sustainable change. It examines how gender roles, activities, needs, opportunities, rights and entitlements affect men, women, girls and boys differently. It deals with the relationships between females and males, their access to and control of resources and the constraints they face relative to each other. It respects the rights of all learners – women, men, boys and girls – equally and gives equal access to learning opportunities, resources and protections. All learners benefit from and are treated in education equally without the limitations set by stereotypes, rigid gender roles and prejudices. It covers gender-based equal opportunities, gender equality and justice, and gender roles, identity and stereotypes.</i>
3. Human rights education	<i>Education that promotes universal respect for and observance of all human rights and fundamental freedoms and thus contributes, inter alia, to the prevention of human rights violations and abuses by providing persons with knowledge, skills and understanding and developing their attitudes and behaviours, to empower them to contribute to the building and promotion of a universal culture of human rights.</i> <i>It includes equality and non-discrimination, human rights values, dignity, justice, inclusion and participation and respect for human rights and fundamental freedoms.</i>
4. Peace and non-violence	<i>Education about peace and peace-building, mediation, conflict prevention and resolution, non-violence, reconciliation and living together peacefully. It includes advocating for friendly relations among peoples and nations, challenging negative stereotypes, promoting peaceful solutions, learning to live together and preventing violent extremism and other forms of violence including bullying.</i>
5. Climate change education	<i>Education to help people, in particular youth, understand, address, mitigate, and adapt to the impacts of climate change. It encourages changes in attitudes and behaviours needed to put the world on a more sustainable development path, and build a new generation of climate change-aware citizens.</i> <i>It covers various responses to climate change including mitigation, adaptation, impact reduction and early warning.</i>
6. Environmental sustainability	<i>Education about responsible interactions with the environment to avoid depletion or degradation and to promote environmental quality and health. It includes, caring for the planet and protecting nature, environmental justice, biodiversity and water.</i>
7. Human survival and well-being	<i>Education that promotes social well-being and harmony including in future generations due to healthy environmental systems. It includes health of the planet and environment related to human well-being, disaster risk reduction and sustainable cities and communities.</i>

8. Sustainable consumption and production	<i>Education on the use and production of resources, products and services that have a minimal adverse impact on the environment. It promotes resource and energy efficiency, sustainable infrastructure and green jobs. It includes responsible and sustainable lifestyles, the green economy and sustainable energy.</i>
Dimensions of learning	
Knowledge	<i>Factual information and understanding acquired through study and/or experience.</i>
Skills	<i>The ability to carry out a task well as a result of training, practice and innate aptitude. Skills may be physical, mental or both.</i>
Values	<i>Principles that form the foundation on which individuals conduct themselves and interact with others and with the environment around them.</i>
Attitudes and behaviours	<i>Ability to act on the basis of beliefs and knowledge acquired through study or experience.</i>
Levels of education	
Pre-primary	<i>Education designed to support children's early cognitive, physical, social and emotional development and introduce young children to organized instruction outside of the family context. Participants are usually aged from three years.</i>
Primary and secondary	<i>Education designed to:</i> <i>(i) provide students with fundamental skills in reading, writing and mathematics (i.e. literacy and numeracy) and establish a solid foundation for learning and understanding core areas of knowledge and personal development (primary education); and</i> <i>(ii) prepare students for further education at post-secondary and tertiary levels and for entry into the labour market (secondary education).</i> <i>It includes both general and vocational education.</i>
Tertiary	<i>Education designed to provide learning activities in specialised fields of education. It aims at learning at a high level of complexity and specialisation. It includes both what is commonly understood as academic education and advanced vocational or professional education.</i>
Types of education	
Adult education	<i>Education specifically targeted at individuals who are regarded as adults by their society to improve their technical or professional qualifications, further develop their abilities, enrich their knowledge with the purpose to complete a level of formal education, or to acquire, refresh or update their knowledge, skills and competencies in a particular field.</i>
Formal education	<i>Education that is institutionalized, intentional and planned through public organizations and recognized private bodies which – in their totality – constitute the formal education system of a country. Formal education programmes are recognized by the relevant national or sub-national education authorities. Formal education consists mostly of initial education (e.g., pre-primary, primary, secondary and tertiary education).</i>
Non-formal education	<i>Education that is an addition, alternative and/or a complement to formal education within the process of the lifelong learning of individuals. It is often provided to guarantee the right of access to education for all. It caters to people of all ages but does not necessarily apply a continuous pathway-structure. It may be short in duration and/or low-intensity, and it is typically provided in the form of short courses, workshops or seminars. Non-formal education mostly leads to qualifications that are not</i>

	<i>recognized by the relevant national or sub-national education authorities or to no qualifications at all. Non-formal education includes programmes on life skills including literacy and numeracy, work skills, and social or cultural development. Most types of adult education are also included.</i>
Vocational education	<i>Education that is designed for learners to acquire the knowledge, skills and competencies specific to a particular occupation or trade or class of occupations or trades. Vocational education may have work-based components (e.g. apprenticeships). Successful completion of such programmes leads to labour-market relevant vocational qualifications acknowledged as occupationally-oriented by the relevant national authorities and/or the labour market. Vocational education can be offered at secondary and post-secondary or tertiary levels of education.</i>

IV. Information about the respondent

Country:

Hungary

Organization:

Permanent Representation of Hungary to OECD and UNESCO

Date of submission:

17.12.2020

V. Other contributors consulted during the completion of this questionnaire

Please indicate below the names of other organizations and contributors consulted during the completion of this questionnaire.

Government institutions including other Ministries (please specify):

Ministry of Human Resources; Ministry of Innovation and Technology

National human rights institutions (please specify):

Local and regional authorities responsible for education (please specify):

Other local and regional authorities (please specify):

Organizations representing education stakeholders (e.g. teachers, students, parents, etc.)
(please specify):

Hungarian Rector's Conference; various higher education institutions

Other civil society organizations (please specify):

Others (please specify):

VI. Questionnaire

A. Laws and policies (preamble and paras 4 and 7 of the 1974 Recommendation)

A1a. Please describe any specific national or sub-national laws, legislation or legal framework(s) in your country that govern the promotion of global citizenship education (GCED) and/or education for sustainable development (ESD). Explain whether GCED and/or ESD themes² are mentioned explicitly or are inferred and what types or levels of education are covered.

In Hungary, the Constitution in force from 2011 declares the responsibility towards future generations and collaboration for sustainable development as shared national values in Hungary: this frames ESD approach in all legislative frameworks, strategies and policy documents in the country.

The Constitution that governs the organization of public education and defines its basic principles is the Act CXCV of 2011 on National Public Education. In Section 1. of the Act among the Purpose and Principles it is stated that 'the whole of public education is determined by knowledge, justice, order, freedom, fairness, the moral and intellectual values of solidarity, equal treatment and education for sustainable development and healthy lifestyle. Public education shall universally serve the common good as well as private objectives respecting the rights of others.' As the Act does not contain specific content regulations, actual topics such as GCED or ESD are not mentioned explicitly, however underlying the whole approach of the Act.

The Act covers pre-primary, primary and secondary education. Also, it guarantees the didactical freedom for teachers that "based on the pedagogical program, they choose the content and the methods of education".

Hungary's International Development Cooperation Strategy for the period 2014-2020 and for the period 2020-2025 covers GCED principles in Hungary. The point 1.8 of the Government Decree no. 1182/2014 of III.27. states the responsibilities of the ministers of foreign affairs and education to collaborate for introducing and implementing GCED in formal education in Hungary. The 12§ of the XC/2014. Law on International Development Collaboration and International Humanitarian Aid highlights the importance of GCED and establishes collaboration between the MFA and the Ministry of Human Capacities (responsible for education) in Hungary in the field of awareness raising and global education.

The National Core Curriculum (hereinafter: NCC) is issued as a government decree (Gov. decree no. 110/2012 of I. 31.) that is why it is mentioned here as reference. However, as it is by definition a curriculum, further details concerning the NCC see point A3a.

The Act 2011/CCIV on national higher education carries some of the contents referred to in point A2. The same and other relevant contents are published with more details in 18/2016. (VIII. 5.) Ministry of Human Capacities decree, which provides the training and output requirements of all undergraduate and master's programs in Hungarian tertiary education.

² See the schema described in paragraph 11 of Section II of these guidelines.

A1b. Please provide the full names of any laws, legislation or legal frameworks referred to in A1a and, where possible, web links to relevant documents.

8. Sustainable consumption and production	1	1	1	99	99	99	99	99

A3a. Please describe any specific current national or sub-national education policies, frameworks or strategic objectives in your country that promote global citizenship education (GCED) and/or education for sustainable development (ESD). Explain whether GCED and/or ESD themes³ are mentioned explicitly or are inferred and what types or levels of education are covered.

ESD-related strategies: The Hungarian Government approved the first National Sustainable Development Strategy in 2007. The Hungarian Parliament established the National Council for Sustainable Development, which adopted the National Framework Strategy for Sustainable Development 2012-2024 (hereinafter: NFSSD). ESD is represented in the NFSSD not only as part of the targets related to human resources but as part of each of the four main areas of concern.

The main objective of NFSSD is to achieve knowledge needed towards transition to SD, in order to ensure “the creation of an education-training-development system (and cultural institutions), which enhances values, moral standards, social quality, emotions, community attachment, ability for systematic approach, as well as ensures knowledge, skills and competences required on the labour market, the evolvement of new forms of social learning and the need for lifelong learning”.

Although the Hungarian titles of the other relevant policy documents refer to environmental education, their content covers the ESD topics: the fourth National Strategy for Environmental Education serves as an implementation plan for ESD: it is prepared and periodically revised by

³ See the schema described in paragraph 11 of Section II of these guidelines.

NGOs. The National Environmental Program also serves as an implementation plan. The term 'environmental education' is often used in a wider context, referring to ESD in Hungary.

At strategic levels, relevant strategies share the same vision on sustainability and ESD. Such relevant policy documents include: the National Sustainable Development Frame Strategy; the National Sustainable Development Strategy; the National Sustainable Development Strategy Second Progress Report (2015/2016, prepared in 2017); the Hungarian National Lifelong Learning Strategy; the Hungarian National Youth Strategy; the Hungarian Higher Education medium-term Strategy: "A Change of Pace in Higher Education".

The implementing regulations of the new Act on National Higher Education (2011) enable the introduction of sustainability issues for any courses, trainings and higher education courses at any level. All higher education institutions may start new programmes and courses dealing with (at least partly) SD. Implementation belongs to higher education institutes. An analysis of Output Criteria shows that many disciplinary and interdisciplinary courses deal with SD and ESD. More than 50 MSc courses demonstrate a strong SD component; mostly among the competence goals, less among educational aims (of the Output Criteria).

Non-formal and informal ESD is addressed in the National Framework Strategy on Sustainable Development and in the 4th National Environmental Program (chapter 6.1) as well as in the National Environmental Education Strategy. Specific dimensions of ESD are apparent in the various national strategies in the field of environmental protection, climate change or water management, such as the 4th National Environmental Programme, the National Development 2030 – National Development and Territorial Development Concept, the National Strategy for the Conservation of Biodiversity in 2015-2020, the Second Climate Change Strategy of Hungary for 2014-2025 with an outlook to 2050, the National Nature Conservation Master Plan, the National Rural Development Strategy 2012-2020, the National Water Strategy, the National Forestry Strategy 2016-2030 and the National Landscape Strategy 2017-2026.

GCED-related strategies: Community service: It is self-evident that developing skills can be most effective by practising them. This consideration led to the introduction of a minimum 50-hour-long compulsory community service as a pre-requisite for issuing secondary school leaving examination certificates in 2016. Most typical fields of this voluntary work are social institutions, old-age homes, public health institutions, environmental protection organizations and the kind. There is no doubt that this type of service promotes skills like empathy, flexibility, co-operation and problem-solving skills and has a positive effect on attitudes like respect and responsibility.

By putting students in an out-of-school environment they are likely to encounter people of different attitudes, ages, beliefs, social backgrounds etc. – still mostly within their local community. Certification of the decision of the community service required for issuing secondary school leaving examination certificates shall be required for the first time in the case of secondary school leaving examination started after 1 January 2016. (Act CXC of 2011 on National Public Education: Section 97 (2))

Digital transformation Digital Education Strategy of Hungary: Digitalization is an undoubtable pre-requisite of achieving the goals in 4.7 in GCED/ESD. In 2016 the Government of Hungary adopted the Digital Education Strategy of Hungary (DES). One of the most important goals of the strategy is to provide students with appropriate digital competences and get them prepared for Life Long Learning. Another goal of the DES is to ensure that a sufficient amount of digital contents are available in an up-to-date learning environment. To provide teachers with the opportunities to gain the necessary digital methodological knowledge as well as the provision of the necessary infrastructure (network and devices) in schools.

In the course of the implementation of the DES the development of broadband internet network and Wi-Fi systems have been carried out starting in 2018. The resources allocated for these

developments add up to 26 billion forints till the end of 2019. The state funds the operation, the continuous development and expansion of the National Educational Portal (NEP). Services of the NEP are available for everyone free of charge. For the time being several tens of thousands learning objects can be found on the NEP (<https://www.nkp.hu/>), being developed continuously, including interactive tasks, animations and films.

Textbooks and workbooks developed in the framework of the state-funded educational textbook development program are also available on the portal. The new textbooks are also available in a smart-book format containing interactive tasks, animations and videos besides the basic textbook contents.

Digital Child Protection Strategy: Hungary pays particular attention to digital child protection, the prevention of school bullying and peer abuse and implementing restorative practices for the treatment of such cases. The rapid technological change of the 21st century and the growing appreciation of the Internet among young people call for creating a safe digital environment for children providing access exclusively to digital space contents having a positive impact on their development.

The Digital Child Protection Strategy of Hungary which was adopted in Government Resolution 1488/2016 (IX. 2). The Digital Child Protection Strategy (hereinafter referred to as DCPS) focuses on promoting mindful, value-creating use of the Internet, on developing conscious media use and on emphasizing the enforcement of policies and measures to protect children, privacy and rights related to personality. In relation to DCPS, a detailed action plan has been adopted to implement the DCPS objectives with the involvement of inter-ministerial and non-governmental actors.

The Ministry of Human Capacities of Hungary supports school anti-bullying programs that can be effective tools in preventing and handling cases of school bullying. ENABLE implemented by the Educational Authority of Hungary with the support of the Ministry of Human Capacities of Hungary is a remarkable example of such programs. Through this program, teachers receive practical assistance in preventing, detecting, and intervening school bullying. The program's accredited in-service teacher training has been integrated into the repertoire of the Pedagogical Education Centres. (ENABLE is a complex program aiming to reduce violence and harassment in schools with its mainly classroom-based activities held by trained teachers and school psychologists. Institutions can choose from two modules, both of which take 10 lessons.)

According to 18/2016. (VIII. 5.) **Ministry of Human Capacities Decree:** education on sustainable development is a horizontal requirement in all higher education trainings.

B. Curriculum (paras 4 and 10-19 of the *1974 Recommendation*)

B1a. Please describe in which ways GCED and ESD are mainstreamed in school curricula. Indicate whether topics are taught as standalone subjects or are integrated into the curricula of other subjects. Explain whether GCED and/or ESD themes⁴ are mentioned explicitly or are inferred and what types or levels of education are covered.

Pre-primary education is based on the National Curriculum of Kindergarten Education in Hungary. This document establishes development areas, which include: health and (social and personal) well-being and emotional, moral, and value-oriented community education (which contains elements of GCED and ESD) with a focus on the appreciation of the values. The activity areas include learning about the environment.

In primary and secondary education, a three-level structure constitutes the overall framework for curricular matters:

- The National Core Curriculum (NCC) is issued as a government decree. It provides the basic principles, specifies the obligatory and common objectives of the educational/teaching work performed in the general (non-vocational) phase of education. It focuses on the acquisition of key competences required for lifelong learning. It is the most important document regulating the content of the public education system. It contains the development fields, educational goals, and the tasks and values of the national education system and the content of subject areas.
 - It is the Framework Curricula, which elaborate the implementation of the NCC. Several framework curricula are provided centrally for the different educational contexts. They serve as a basis for developing the Local Curricula.
 - At institutional level, local curricula are developed by schools in accordance with the stipulations of NCC and the relevant Framework Curricula. The local curriculum takes into account the local circumstances and conditions.

The NCC has gone through a thorough revision, being introduced in a yearly schedule starting in September 2020 on grades 1, 5 and 9. It prescribes the full respect for human rights throughout the whole education cycle including the respect for equality, democracy and religious diversity as well as the knowledge of basic concepts concerning gender equality and anti-discrimination.

An important part of the desirable attitude to be shaped is to overcome personal prejudice. Among the twelve most important development fields and educational goals defined in the modified NCC you can find „Education for citizenship and democracy”; and also „Education for sustainability and environment consciousness” Consequently these educational goals must be represented to a certain extent in each school subject.

School subjects like History and Civic Studies are special in respect of GCED as they provide the best channels for creating democratic commitment in a targeted way. Basic principles and goals of teaching History include making students familiar with the operations of a democratic state organization, the principles of the rule of law, human rights and aware of citizens’ rights and responsibilities.

Gender equality is among the so called „comprehensive” topics in History, which means that the issues concerning men’s and women’s lifestyles, social status, and emancipation are to be tackled in a recurring way during the whole teaching-learning process.

An invention of the revised NCC is making „Civic studies” on grades 8 and 12 a separate and compulsory school subject as opposed to the previous version of the curriculum when civic studies used to be integrated into History. This modification represents the

⁴ See the schema described in paragraph 11 of Section II of these guidelines.

importance of the topics incorporated into Civic studies, such as the importance of equal opportunities and social justice, the essence of the prohibition of discrimination and the realization of the negative impact and social risks of discrimination, stereotypes and prejudice.

The new NCC places the task of developing a commitment to a sustainable future among its learning and educational goals making an impact on the entire educational process in public institutions. Under the new NCC, schools need to support students in developing their sense of responsibility for the environment and the future of our communities beyond the daily practice of learning and community life, by organizing whole-institutional project days and thematic weeks, by programs calling for students' collaboration and activities, and by involvement in local, regional, national, and international programs.

In order to help students understand the dangers of irresponsible resource management to biodiversity, and to improve their own responsibility and agency for shaping a sustainable future, the new NCC requires educators to set an example and provide learners with opportunities for gaining knowledge and experience relating to the conscious, economical and responsible use of resources.

The NCC requirements will be included in the subject-based frame curricula developing subject-specific knowledge and competences related to ESD (especially strong in History, Geography, Biology, Physics and Chemistry, but also present in all subject areas). This will ensure that the horizontal educational objectives set out in the NCC, including ESD, can be achieved by general (public) education institutions in a sufficiently diverse way, embedded in a variety of learning and teaching activities, using a combination of approaches across subjects and disciplines. Besides, a new subject Sustainability is under development for secondary schools, which can establish school-leaving examinations in this field.

GCED and ESD are incorporated into the curricula of several Hungarian HEIs. The "Environmental sustainability expert" and "Regional and environmental economics" study programmes are integral parts of the "offer list" of the Hungarian tertiary education. The majority of Hungarian HEIs offer further standalone subjects along the concepts of GSED and ESD. Several Hungarian universities operate competence centers that deliver SDG related research activity.

B1b. Please provide examples of curricula in which GCED and/or ESD are mainstreamed and, where possible, web links to relevant documents.

Excerpts from the National Curriculum of Kindergarten Education:

"2. The child, while discovering their environment, acquires experiences that are necessary for safe orientation and orientation in the environment, appropriate to their age. They get to know the homeland, the people living there, the domestic landscape, the local traditions and customs, customs, belonging to the community, the values of the national, family and material culture, they learn to love and protect them."

"4. In kindergarten education, the principle is that: (a) the personality of the child is surrounded by acceptance, respect, love, respect and trust; (b) education enables and facilitates the development of the child's personality and the development of the child's individual skills and abilities; (c) the pedagogical effects used in pre-school education should be tailored to the child's personality.

5. In order to implement the principles, pre-school education ensures: (...) the transmission of human values; about the personal and material environment necessary for the healthy development and development of the child.

6. In the pre-school education of children belonging to nationalities, the preservation, care, strengthening, transmission, language education and the possibility of integration based on multicultural education must be ensured.

7. In the pre-school education of the children of families forced to leave their homeland (hereinafter: migrants), the preservation, care, strengthening and social integration of self-identity must be ensured.”

Excerpts from the National Core Curriculum:

“The document focuses on cross-cutting issues around the world, emphasizing shared responsibility for sustainability.”

“Key development task: Sustainability, environmental awareness The rising generation needs to know and appreciate the rich diversity of life forms in nature and culture. They need to learn to use resources consciously, sparingly and responsibly, given their ability to innovate. The aim is to shape behaviours of students so that environmentally conscious, value-based, and sustainable behaviour based on knowledge and the love of nature and the environment becomes pre-dominant. The educational institution must prepare them to exercise their civic duties and rights in relation to the environment. Efforts should be made to make students aware of the economic and the social processes that can cause changes and crises, and to get involved in the preservation and enrichment of the values and diversity of their immediate and wider environment.”

“Science and technology competence includes the knowledge of the conditions for sustainability, i.e. a society that is in harmony with nature in the long term and the recognition of the individual and community responsibility for shaping it.”

“Positive attitudes are based on full respect for human rights, including equality, democracy, religious and ethnic diversity. A positive attitude towards a sense of belonging to a municipality, a country, a nation, the EU and Europe in general, an openness to participate at all levels of democratic decision-making, and a sense of responsibility and acceptance of and respect for common values and democratic principles declaration. Creative participation also means civic activities, the promotion of social diversity and cohesion, as well as sustainability, and respect for the values and privacy of others.”

Government Decree no. 363/2012. of XII. 17. on the National Curriculum of Kindergarten Education;

National Core Curriculum: Gov. decree no. 110/2012 of I. 31;

The Globalization Competence Center of Széchenyi István University carries out interdisciplinary research in the field of the education of the SDGs. The key priority of the Automation Research Center of Széchenyi István University is the observation of the SDGs.

C. Teacher education (including the training of trainers and educators) (paras 4 and 33-37 of the 1974 Recommendation)

C1a. Please describe in which ways GCED and ESD are mainstreamed in initial training and in continuing professional development of teachers, trainers and educators. Indicate whether all teachers, trainers and educators or only some are required to receive training to teach GCED and/or ESD.

According to the 8/2013. (I. 30.) Ministry of Human Capacities Decree on common requirements for teacher training and on training and output requirements for individual teacher professions carries most of the contents referred to in point C3.

Higher education institutions shall deliver programmes on the basis of an educational programme. As part of their educational programmes, higher education institutions shall develop the curricula for bachelor, master and tertiary vocational programmes in accordance with the programme and outcome requirements issued by the minister, and freely for postgraduate specialisation programmes.

There is no pre-prescribed educational content for those who teach in higher education, because teacher qualification is not a condition for teachers teaching in Hungarian higher education. Institutions may require training on their own in both above mentioned subjects, but there is no central regulation in this area. That is the reason we cannot give more specific information about the tertiary education in C2 point and further.

The following training courses offered at Eszterházy Károly University (EKU) to all teachers, trainers and educators: Field of studies where GCED is included as a specialization within the education field:

- Special Needs Education
- Inclusive Education
- Teacher of Ethics

Mandatory course to all teacher training programs students where GCED is mainstreamed:

- Psychology of cognition and Individual Treatment of Learners,

Elective courses for teacher training programs where GCED is featured :

- Conflict Resolution and Management,
- Multicultural Education,
- Learning Difficulties and Developmental Procedures,
- Social Competence Development,
- Roma College,
- Inclusive Education in Pre-Schools,

Training courses for teachers where GCED is included:

- Differentiation and Development Methods,
- Methods in socio-therapy for anger management in schools.

Field of studies where ESD is featured as a specialization within the education field:

- Environmental Science Teacher,
- Sustainable Environment and Resources Management,
- Environmental Economic Studies,
- Environmental Physics,
- Environmental Problems in Geospheres.

Semmelweis University Our educators at Semmelweis University are not required to receive training to teach GCED and ESD. It must be clarified that they are practically not teachers per se but rather researchers and medical professionals at the same time who are also performing

teaching. Currently, these educators receive a non-obligatory teacher training course which is focusing on the teaching methods and on infocommunicational technologies. However, Semmelweis University is currently involved in an ERASMUS+ project called CLILMED (<https://clilmed.eu>) which aims to provide guidebooks for teachers on how to deal with intercultural classrooms thus this aspect is going to be included in our staff development programmes in the near future.

Eötvös Loránd University GCED and ESD is mainly taught to specialized teachers.

University of Nyíregyháza There is a training or a lecture for the instructors every year.

Széchenyi University: "Education for sustainability and health" is a mandatory course of the curriculum of teachers as well as social pedagogy (BA) "Project based environmental education" is an integral part of the training programme of primary school and nursery students.

University of Szeged In the initial trainings of the teachers, trainer and educators the above areas are usually mainstreamed.

In continuing professional development of teachers, trainers and educators, it is basically implemented in two ways, within formal and non-formal settings, that is further education and further trainings to develop personally and professionally, to broaden teacher's knowledge and experiences to keep up with needs. Formal training is required in some disciplines or in some fields of specialization in relation to those areas mentioned in the question, and is recommended in other disciplines and fields of specialization.

The University promotes non-formal education and training of teachers through various channels, be it a conference, a forum, a meeting of experts, sharing of good practices, workshops or other non-formal forms of training. The Faculties support the further training of lecturers in these fields and the expansion of their knowledge.

All future teachers studying at the University of Szeged (USZ) have the possibility to enroll to the elective courses Environmental Hazards and Environmental Education, Multicultural Education – Roma Integration, and The Health Promoting School Project offered by the Juhász Gyula Faculty of Education. These courses put a great emphasis on ESD either/or GCED issues. The common Teaching Profession Module of each upper-primary and secondary school teacher training program offered at USZ mainstreams GCED within the compulsory subject course of Psychology and Sociology of Education. Lower primary teacher training integrated GCED and ESD into its curriculum in the form of subject courses like Men and Society, Sociology of Education, or Natural Sciences. Within the continuing professional development of teachers the in-service teacher training programs of the Faculty of Juhász Gyula contain a compulsory knowledge block which also includes GCE issues within the subject School and Society. There are also teacher training programs specialized for GCED and ESD issues like Teacher of Natural and Environmental Sciences, or Teacher of Technical Sciences, Life conduct and Practice; and also in-service teacher training programs like Health Promotion, Mental Health Promotion; Youth Studies; Multicultural Education or Roma Integration Studies.

At the national level, certain programmes of teacher training are obliged to involve the issue of diversity: teacher of Romology, Greek and Greek as Ethnic Minority Language and Culture. At the national level, certain programmes of teacher training cover issues of gender: teacher of Spanish, Dutch, Portuguese, and Romology.

At the level of initial training, at the Faculty of Humanities and Social Sciences, University of Szeged, Hungary, students are exposed to GCED and ESD topics through courses related to culture, cultural studies, linguistics, literature, modern languages, history, philosophy and sociology. The GCED and ESD apply to the initial training and continuous professional development of teachers and trainers. The course description of each training includes how the perception of sustainable development can be realized during the given seminar and / or lectures.

These two aspects also appear in the general objectives of National Core Curriculum and the related framework curricula, which are the basic documents of Hungarian public education.

University of Pécs

Knowledge The graduate / qualified teacher has basic psychological, pedagogical and sociological knowledge of views on personality traits and development, socialization and personalization, disadvantaged children and teenagers, personality development disorders, causes of behavioural problems, methods of parenting, talent management, and health promotion. Knows the methods of getting to know learners. Knows the special competencies to be developed during the teaching and learning of the subject, the methods of their development and diagnostic measurement. He is aware of the role and possibilities of the subject in the personal development of the students.

Abilities The graduated teacher is able to form a realistic picture of the world of children and teenagers, the possibilities of education and the development of the learner's personality. Able to create pedagogical situations, taking into account the individual needs of learners, which promote the intellectual, emotional, social and moral development of them and the establishment of a healthy lifestyle. He / She is able to choose appropriate methods for learning and for developing learners with different abilities and prior knowledge. He / She is able to recognize, effectively educate and provide differentiated treatment to talented learners as well as to learners with difficulties or with special educational needs, disadvantaged, multiple disadvantaged learners and learners with special needs in their subject.

Attitudes A qualified teacher is open to learning a variety of methods of personality development. He / She respects the personality of the learners, is able to see the values in everyone and to treat all his / her learners with positive emotions. He / She is sensitive to learners' problems, strives to provide the conditions for healthy personality development for all learners.

The aim of the teacher training in Hungary is to develop the 8 key competencies of teacher candidates, of which we would like to highlight the knowledge, skills and attitudes acquired in the following areas:

In the field of helping and developing of groups and communities: The graduated teacher has a basic knowledge of social and intergroup processes, the functioning of democracy, enculturation, and multiculturalism. He / She knows the psychological, sociological, and cultural characteristics of the groups and communities. He / she can apply methods that support collaboration, both in subject teaching and in leisure activities. He / She is able to deal with conflicts effectively. He / She helps to develop the commitment of group members to the community, to learn to take a responsible, active role in a democratic society, and to accept local, national and universal human values. He / She is able to interpret socio-cultural phenomena that affect learners' chances, life in school and out of school, and use them for their benefit. It can contribute to creating a tolerant, open atmosphere in schools and classrooms. In his / her own attitudes, the teacher is committed to basic democratic values, characterized by social sensitivity and helpfulness. He / She carries out his teaching work without prejudices, he / she tries to adopt the approach of inclusion. He / She is committed to national values and identity, he / she is open to education for democratic thinking and behaviour, and to that of environmental awareness. In the world of the school, he / she consciously strives to accept the diversity of values, to be open to the opinions and values of others, and to respect them, especially regarding ethnicities and nationalities.

In the field of learning support, organization and management: The teacher has a basic knowledge of methods for recognizing and developing learning motivation. He / She has the knowledge necessary to create the physical, emotional, social, learning characteristics and conditions of the learner-centered learning environment. He / She is informed about the issues of differential pedagogy, adaptive learning organization, selection and application of educational strategies and methods. He / She knows the importance of preparing for lifelong learning. He / She is able to select and implement methods and organizational forms for well-thought-out strategies for different goals, providing motivation, differentiation, learner

activity, helping learners to develop their ability to think, solve problems and cooperate. He / She is able to organize a learning environment that is calm, safe, and conducive to effective learning. He / she is able to establish the ability-system of lifelong learning and to practice his / her techniques. He / she acknowledges that in order to create the right learning atmosphere, the specific needs, ideas, and initiatives of students must be taken into account. He / She seeks to work with learners to make the learning process effective. He /She strives to apply learning and teaching strategies and methods that promote activity, interactivity, and differentiation in accordance with age, individual and group characteristics.

The teacher education curricula is under revision in Hungary. As the key values of the National Core Curriculum will be explicitly present in the renewed teacher training curricula, ESD will be strongly present in the new trainings.

C1b. Please provide examples of teacher training policies or curricula in which GCED and/or ESD are mainstreamed and, where possible, web links to relevant documents. If possible, include examples related to initial training and to continuing professional development.

Eszterházy Károly University

GCED

- Learning Difficulties and Developmental Procedures
- Methods in socio-therapy for anger management in schools
- Inclusive Education in Pre-Schools

ESD

- Climatology,
- Environmental Protection,
- Environmental Health Studies.

Complex basic program (KAK): The Complex Basic Program is a set of personality and ability development activities that include a set of complex pedagogical methods for increasing (learning) opportunities. The program builds on the diversity and uniqueness of students, the development of individual skills through social interactions, which means support in the teaching-learning process and in the preventive reduction of school dropouts without qualifications. The primary goal of the Complex Basic Program is to develop and disseminate pedagogical methods suitable for the prevention of students dropping out of school, for supporting teachers in primary and secondary education, and for renewed teacher training and in-service training content to facilitate the change of pedagogical attitudes. It also aims to nurture talent and find individual learning paths. A further aim of the program is to strengthen the methodological culture enabling differentiated, person-centered education in public education institutions, to develop the pedagogical and methodological tools of institutional education that encourages openness, and to create a fair, equal learning environment for the successful progress of all students.

The service portfolio of the Complex Basic Program includes 7 accredited (free of charge) teacher training programs: Complex Basic Program Concept (KAK), Differentiated development in heterogeneous groups of students methodological training (DFHT), Logic-based subroutine (LA), Digitally Based Subprogram (DA), Life Practice Subprogram (CA), Arts-Based Subprogram (MA), Exercise-based subprogram (TA).

Two of our trainings are basic training: Complex Basic Program Concept (KAK) and Differentiated development in heterogeneous groups of students methodological training (DFHT)

Semmelweis University

We have an obligatory environmental awareness course of the Directorate of Security Service of Semmelweis University for all new employees

(<https://semmelweis.hu/biztonsag/uj-belepo-oktatas/>). In this course the concept of environmental sustainability is thoroughly addressed.

University of Nyíregyháza

BAI002 Environment and Human course
KO1111 The Practice of Multicultural Education
UPX1105L Multicultural Education

University of Szeged

One of the best examples is the University's mentoring program, which aims to help students successfully graduate with a variety of tools, to reduce or mitigate any gaps through catch-up programs, to support students' high-quality daily life, and to guide them in the labor market. In order to be able to help students as effectively and efficiently as possible, teachers, trainers and educators in the mentoring program continuously participate in further trainings, forums and workshops, and share their good experiences and collaborate with the Student Counselling Centre of the University of Szeged.

Another good example is the "curriculum and subject development based on learning outcomes" (in short: the "learning outcomes" approach) introduced at the University. In order to encourage and foster practical implementation of the initiative, teachers, trainers and educators involved participated in trainings, forums, and workshops where they received support for successful implementation. All this can greatly contribute to the improvement of the effectiveness and efficiency of education, and thus to the mainstreaming of the content of terms in question.

In addition to the above, another good example should also be noted: the training of Curriculum and curriculum development based on learning outcomes in higher education.

At the Faculty of Humanities and Social Sciences, courses like Introduction to Literature and Culture, Introduction to Linguistics, Introduction to British and American Studies: History and Culture for Teachers, Introduction to Applied Linguistics should also be considered.

Beside these, 8/2013 (I. 30.) EMMI decree declares that the GCED and ESD must appear in teacher training. These two aspects also appear in the general objectives of National Core Curriculum and the related framework curricula, which are the basic documents of Hungarian public education.

University of Pécs

Concrete examples - courses in teacher training at the University of Pécs (UP)

1. Creating an inclusive learning environment, mutual acceptance, fostering respectful dialogue, development of willingness to debate and critical thinking in teacher training at the UP · Human and Child Psychology · Personality and Health Psychology · Developmental Psychology · Learning Centered Communication · Learning & Teaching + School practice related to the course Learning & Teaching · School and Society · Education & School + Practice connected to the subject "Education and the school" · Practice of intercultural education
2. Independent teacher training programs to prepare for teaching the language and culture of the Croatian, German and Roma minorities in Hungary: · Teacher of Romology · Teacher of German language and culture and German as a minority language and culture · Teacher of Croatian language and culture and Croatian as a minority language and culture · Ethnic Minority Kindergarten Teacher (German) · Ethnic Minority Primary School Teacher (German)
3. Teacher training programs for in-service teachers (4 semesters): · Social work at schools · Roma social studies · School practice leading mentor teacher · Preventive and corrective pedagogy, psychology · Talent management, talent development

4. In service-training programs of the project Methodological renewal of public education to reduce early school leaving

- Conflict management and the development of emotional intelligence
- Cooperative learning organization to prevent early school leaving
- Basics of Romology - Preventing student dropout
- Assessment to improve effectiveness in class
- Individual treatment, personal care
- Dormitory education to prevent early school leaving
- Developing learners' resilience - an intercultural perspective in institutional development preventing drop-out
- Complex development of learners against early school leaving without qualification - Personalized differentiation against early school leaving
- Complex development of learners against early school leaving without qualification - Digital-based methods
- Complex development of learners against early school leaving without qualification - Practice-based methods
- Complex development of learners against early school leaving without qualification - Logic-based methods
- Complex development of learners against early school leaving without qualification - Methods based on art education
- Complex development of learners against early school leaving without qualification - Exercise-based methods

5. Examples of mutual solidarity, common identity and collective responsibility at the University of Pécs:

Let's teach for Hungary! A university mentoring program in which students assist the career guidance of disadvantaged children. The aim is to reduce early school leaving, to present the possibilities of further education, to set an example. The student revives, systematizes, and expands on understanding the connections between school and society. He / She acquires knowledge of psychology and social psychology that can positively influence non-formal learning processes. He / She learns the approaches and practices of formative and metacognitive assessment. He / She learns the most important theoretical approaches and practical implementation of positive psychology. The student will be able to implement successful learning support practice in non-formal learning situations (mentoring), especially among primary school children and their families living in disadvantaged areas. As the course is completed, the student will become open and accepting with a diverse learner and family environment, believing in the power of peer support, recognizing the importance of emotional intelligence and formative assessment in supporting learning. He /She evaluates the problem situations that arise as challenges, self-development situations, he / she approaches them with a positive attitude, and strives to frame them positively.

Crime Prevention at School The aim of the course is to prepare students for crime prevention sessions, to prepare prospective teachers on what problems they can ask for help from whom, and where they can direct students with problems. By completing the course, prospective teachers will be able to acquire theoretical and practical knowledge that will enable them to teach independently on the topic of becoming a perpetrator and victim, and will also gain personal experience in

applying constructive pedagogical methods during practice-oriented training. They learn the necessary legal concepts and the most common ways to become a victim and perpetrator. Teacher candidates will be able to organize and conduct group assignments. They can plan a crime prevention education for a class. In the theoretical part of the training, lectures on the basic legal and criminological knowledge related to the topic can be attended, focusing on crimes affecting young people and the recognition and treatment of domestic violence. They can learn about other areas of everyday crime prevention through group assignments and situational games. Students will be introduced to methods of teaching with crime prevention short films. The theoretical background of the practical part is the acquaintance with cooperative pedagogical methods and the pedagogical practice of group work. In the second, practical part of the training, students can apply the familiar cooperative methods and group leadership techniques.

6. Other programs at University of Pécs:

Inclusive University The University of Pécs Inclusive University is a value-oriented, open-minded, and inclusive organization as an intellectual workshop of the country and the region. It seeks to reinforce and extend this approach to all citizens of the University and those involved in its services. As an organizational unit, the Inclusive University, as an umbrella organization, coordinates, reinforces, extends, and coordinates inclusive good practice across faculties and units. It facilitates the communication and collaboration of inclusion programs, while supporting the practical implementation of inclusion through its own programs, events, and services. The Inclusive University promotes a more successful education for UP students, prospective students and the well-being of all UP citizens by creating a diverse, inclusive university environment. By doing so, he wants to strengthen the University's individual image and focus on its local values, thereby increasing the unique position of the University of Pécs in the higher education market.

The Emerging University, with its emphasis on inclusive academic excellence and the theoretical and practical implementation of complex development for inclusion, is of paramount importance to PTE, with the aim of educating our students to become outstanding professionals. <https://www.inclusiveuniversity.eu/>

WlislOCKi Henrik Roma Student College (WHSz) In 2001, the Department of Romology launched the WlislOCKi Henrik Student College with support from the European Union's pre-accession (PHARE). The aim of the WHSz is to bring together Roma/Gypsy students attending the various faculties and departments at the University of Pécs as well as those who are interested in Roma studies and Roma culture. In addition to building research skills, the WHSz also strongly reinforces community development and social responsibility and is run based on the principle of inclusivity. Throughout the implementation of the project, a major focus was on building inclusivity in order to achieve a more tolerant society. The WHSz has operated for 15 years and today its inclusive complex model is well-described and documented. Looking toward the future, this project seeks to jointly review, improve, and prepare a methodological description together with its international partners in order to facilitate international adaptation of the university model. With the support of a significant EU fund, the WHSz launched a scholarship program from 2013-2015. It is important to mention that two pillars provided the backbone for this program: the University of Pécs and the NGO Számá dă Noj Association, with its long standing history of community empowerment. These two pillars complement each other: while the university's background provides opportunities for inclusion into higher education, the NGO provides a vivid relationship between the local Roma/ Gypsy communities and the students; student volunteering opportunities are essential in the WHSz program. Through these two pillars, research, training, practice and application are supported in

significant ways. <https://wlislocki.pte.hu/content/wlislocki-henrik-roma-student-college-whsz?language=en>

Green University The idea of the “Green University” is a complex system including built environment, ecologically conscious operation and maintenance, the formation of related attitudes and the creation of an educational and research background. Nearly 200 courses are dealing with environmental issues and sustainable development at the university at present. <https://zoldegyetem.pte.hu/en>

An amendment to the Government Decree 326/2013. (VIII. 30.) entered into force in 2018 includes ESD competences in the competence portfolio of teachers. This means that for teachers' qualification and advancement processes, their ESD competences need to be proven with evidences from their daily work. This applies to each kindergarten teacher, primary and secondary school teacher (of all subject areas), but even school psychologists, speech therapists, special need instructors, school management and school leaders.

A mixed group of experts (teacher training, education researcher, certification expert, head of institution and practicing teacher members) was involved in the elaboration of the competence framework. Through the work of this expert group, ESD competencies have been integrated into the evaluation process of educators, and the necessary tools, guides and recommendations have been developed. This served as an initial only the first step towards integrating teachers' ESD competences in teachers' pre- and in-service training as well.

In line with this, with the support of the Ministry of Human Capacities of Hungary, in the school term 2019/2020 5633 teachers and school principals took part in conferences or thematic lectures (free of charge) and 5166 teachers received workshops at 80 sites last year. In 2020, about 15.000 teachers qualified successfully and for 2021 already 10.935 teachers applied for the qualification.

*C2 Please indicate whether teachers, trainers and educators are trained to teach GCED and ESD during initial or pre-service training and/or through continuing professional development. Please enter the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
Initial or pre-service training				
For teachers of selected subjects only (in which GCED or ESD are typically taught)	1	1	1	9
For teachers of other subjects	1	1	1	9
Continuing professional development				
For teachers of selected subjects only (in which GCED or ESD are typically taught)	1	1	1	9
For teachers of other subjects	1	1	1	9

*C3 Please indicate on which GCED and ESD themes pre-service or in-service training is available for teachers, trainers and educators at each level of education by entering the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
1. Cultural diversity and tolerance	1	1	1	9
2. Gender equality	0	0	1	9
3. Human rights	1	1	1	9
4. Peace and non-violence	1	1	1	9
5. Climate change	1	1	1	9
6. Environmental sustainability	1	1	1	9
7. Human survival and well-being	1	1	1	9
8. Sustainable consumption and production	1	1	1	9

*C4 Please indicate whether teachers, trainers and educators are trained to teach the following dimensions of learning in GCED and ESD. Please enter the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
Knowledge	1	1	1	9
Skills	1	1	1	9
Values	1	1	1	9
Attitudes and behaviours	1	1	1	9

*C5 Please indicate whether teachers, trainers and educators are trained to use the following approaches to teach GCED and ESD in primary and secondary education by entering the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Global citizenship and education for sustainable development
GCED/ESD are taught as separate subject(s)	0
Cross curriculum approach (e.g. GCED/ESD are taught in more than one subject but not throughout the curriculum)	1
Integrated approach (e.g. GCED/ESD are taught throughout the whole curriculum)	1
Whole school approach (e.g. GCED/ESD are integrated in the school ethos, management, governance, curriculum, teacher training, teaching practices, the learning environment, and in learning experiences in the community and life outside school)	1

D. Student assessment (paras 4 and 5 of the 1974 Recommendation)

D1a. Please describe in which ways GCED and ESD are covered in student assessments and examinations. Indicate whether students are assessed only on their knowledge of and skills related to the topics being tested or also on their values, attitudes and/or behaviours.

There are no specific student assessments and examinations in Hungary focusing on GCED and ESD. However, the school leaving examinations (especially in Civic Education, History, Geography, Biology, Physics and Chemistry) contain GCED and ESD knowledge, skill and attitude elements. Also in national competence assessments related to natural science, ESD-related knowledge, skill and attitude elements are assessed.

There are no student assessments at pre-primary level in Hungary, and but there are development thresholds in the Kindergarten Education National Curriculum.

Higher Education:

Semmelweis University Student assessments and examinations are focusing almost exclusively on the knowledge and skills related to the actual material. However, the topics covered by the Department of Behavioral Sciences are including many aspects of the GCED and ESD. As of now, students are not assessed or tested based on their values, attitudes and/or behaviours at Semmelweis University in connection with the taught material.

Eötvös Loránd University Students are assessed only on their knowledge of and skills in the formal education. But values and attitudes can be rewarded in a positive way (volunteering, researches)

Széchenyi University Students are assessed on the basis of their knowledge.

University of Szeged The Learning Outcomes approach is used at the University of Szeged. The course description of each subject course contains the knowledge, skills, attitudes, autonomy/responsibility targeted outcomes students should reach by the end of the given subject course. All these four elements are measured according to pre-defined objective aspects. Students are assessed and evaluated primarily on the basis of their knowledge, their proficiency in a given topic, however, university values and principles require students to represent global citizenship and the spirit and mindset of sustainable development in their behavior and attitudes.

University of Veterinary Medicine Budapest In certain subjects dealing with the mentioned topics, the knowledge and skills of students are being primarily evaluated, but the values and attitudes are also taken into consideration.

University of Pécs The student assessments and examinations contain only or mostly knowledge-based tasks and questions.

Kodolányi János University Values, attitudes, behaviours are not tested. In the so called thematic weeks and in the obligatory course "Culture, sport, well-being" we discuss GCED and ESD topics.

*D2 Please indicate whether the GCED and ESD themes below are generally included in student assessments or examinations at each level of education by entering the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
1. Cultural diversity and tolerance	0	1	1	9
2. Gender equality	0	0	1	9
3. Human rights	0	1	1	9
4. Peace and non-violence	0	1	1	9
5. Climate change	0	1	1	9
6. Environmental sustainability	0	1	1	9
7. Human survival and well-being	0	1	1	9
8. Sustainable consumption and production	0	1	1	9

*D3 Please indicate which of the dimensions of learning in GCED and ESD below are generally included in student assessments or examinations at each level of education by entering the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
Knowledge	0	1	1	9
Skills	0	1	1	9
Values	0	1	1	9
Attitudes and behaviours	0	1	1	9

E. Mainstreaming of GCED and ESD in laws and policies, curricula, teacher education and student assessment (paras 4-5, 7, 10-19 and 33-37 of the 1974 Recommendation)

*E1 Based on your responses to questions in the previous four sections (laws and policies, curricula, teacher education and student assessment) please indicate to what extent global citizenship education (GCED) and education for sustainable development (ESD) are mainstreamed⁵ in (a) education laws and policies, (b) curricula (c) teacher education (including the training of trainers and educators) and (d) student assessment in your country. Please enter the appropriate number in each white cell in the table below.

KEY:

0 Not at all

GCED and ESD are not mainstreamed.

1 Partially

Some GCED and/or ESD themes⁶ are mainstreamed. Select this option if GCED is mainstreamed but ESD is not (or vice versa).

2 Extensively

Most GCED and ESD themes are mainstreamed.

9 Not known

It is not known whether GCED and ESD are mainstreamed or not.

99 Not applicable

The given level of government does not have responsibility for the given component (policies, curricula, teacher education or student assessment) and/or does not have responsibility for the given level or type of education. This may occur at the national level in federal countries where education is the responsibility of individual states or at the sub-national level in small countries where there is only one level of government.

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
National				
(a) Education laws and policies	2	2	2	99
(b) Curricula	2	2	1	99
(c) Teacher education	2	2	1	99
(d) Student assessment	0	1	1	99
Sub-national				
(a) Education laws and policies	99	99	99	99
(b) Curricula	99	99	99	99
(c) Teacher education	99	99	99	99
(d) Student assessment	99	99	99	99

⁵ GCED and ESD are mainstreamed if their themes are mentioned explicitly in relevant documents and are expected to be implemented by the relevant authorities (e.g. Ministries, regional or local education authorities), educational institutions (e.g. schools, colleges and universities) and/or education professionals (e.g. teachers, lecturers, trainers and educators) as appropriate.

⁶ Refer to the schema in paragraph 11 of Section II of these guidelines.

F. Technical and vocational education and training (paras 25-29 of the 1974 Recommendation)

- F1 Please describe any major initiatives that have been undertaken to promote GCED and/or ESD in technical and vocational education and training. Describe briefly the outcomes and impact of such initiatives and provide examples of good practices.

The system of Sector Skills Councils (SSCs) was established in 2018. SSCs serve as a platform for building partnerships with economic stakeholders. SSCs are coordinated by the Hungarian Chamber of Commerce and Industry.

The tasks of the SSCs include the continuous development and modernization of the content structure of vocational education and training (VET), as well as the coordination of training supply and labour market needs.

As a good practice, an SSC has been established in the field of environmental protection, among others. As a result, the topic of sustainable development can appear in the VET professional content even better than before, in line with the needs of the economy. The training of environmental professionals thus better meets the needs of the labour market.

G. Adult education (para 30 of the 1974 Recommendation)

- G1 Please describe any major initiatives that have been undertaken to promote GCED and/or ESD in adult education and other forms of non-formal education including youth education, out-of-school education, etc. Describe briefly the outcomes and impact of such initiatives and provide examples of good practices.

United Nations Association of Hungary (UNA-H): Mobile UN-Academies are organized cross-country wise to promote GCED and ESD in tertiary, adult youth education.

As for VET: Training activities relevant to the topic of Open Learning Centers (OLC) are carried out in the framework of the EDIOP 6.1.4 project. Within EDIOP-6.1.4-16 project with the title of "Development of labour market competencies in convergence regions" until 31 October 2020, altogether 855 pcs OLC-specific learning programmes were launched. One of the most popular learning programmes is called "Conscious Citizen in the 21st Century", in which 40 groups participated.

In connection with the development, Open Learning Centers operate in the country. The work of the trainers and learning counsellors - who work in the centers - is backed by a web-based professional support, the facilitation of an online professional community and the operation of a help desk, so that they can perform their tasks more effectively and get to know each other's good practices.

Some good examples of learning programmes: effective self-management, presentation techniques, women in the 21st century, basic knowledge of fire and accident prevention, innovative computing — cloud storage, middle management academy, use of smartphones, tablets, conscious citizen in the 21st century, I will be an entrepreneur.

H. Research and International Co-operation (paras 41-45 of the 1974 Recommendation)

- H1 Please describe what kinds of research or experimentation have been carried out to improve the implementation of GCED and/or ESD. Describe briefly how the results of such activities have influenced education policies, curricula and/or teaching practices.

Hungary takes part in international networks, being especially active in UNECE Steering Committee for ESD and the Carpathian Convention Framework. Such networks provided knowledge to elaborate standards and indicators for ESD competences of teachers (in-service teacher qualification and teacher training), for example, but other good examples inspired the further development of ESD-related national frameworks, especially the Hungarian Green Kindergarten Network and the Hungarian Eco-School Network. Hungary hosted the regional conference on ESD of the Carpathian Convention Framework (the first event dedicated to ESD in that network).

- H2 Please indicate which types of activities are available that promote international co-operation at each level of education by entering the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
Hosting of international meetings on GCED and/or ESD	1	1	1	9
Participation in international meetings abroad on GCED and/or ESD	1	1	1	9
Support for programmes hosting foreign students, researchers and/or teachers	9	1	1	1
Membership of international networks including ASPnet	1	1	1	9
Joint research projects on GCED and/or ESD with foreign institutions	1	1	1	9
Other activities (please specify):				

I. Any other comments

- I1 Please indicate whether your country has faced any constraints, in particular related to global or national crises, including natural disasters, in implementing the 1974 Recommendation during the reporting period.

- I2 Please provide any other relevant information or clarifications regarding the implementation of the 1974 Recommendation or the mainstreaming of GCED and ESD in your country's education system.
