

GUIDELINES FOR THE PREPARATION OF REPORTS BY MEMBER STATES ON THE APPLICATION OF THE 1974 RECOMMENDATION CONCERNING EDUCATION FOR INTERNATIONAL UNDERSTANDING, CO-OPERATION AND PEACE AND EDUCATION RELATING TO HUMAN RIGHTS AND FUNDAMENTAL FREEDOMS

I. Introduction

A. About the 1974 Recommendation

1. UNESCO's 1974 *Recommendation concerning Education for International Understanding, Co-operation and Peace and Education relating to Human Rights and Fundamental Freedoms*¹ (the "1974 Recommendation") aims to promote international education and world peace through understanding, solidarity and cooperation. It was adopted on 19 November 1974 by the General Conference of UNESCO at its 18th session.

2. The 1974 *Recommendation* applies to formal, non-formal and informal education and to all levels, from pre-primary to tertiary and adult education and lifelong learning. The General Conference recommended "*that Member States should apply*" the provisions included in the 1974 *Recommendation* "*by taking whatever legislative or other steps*" that provide institutional (e.g. policies and legal frameworks) and pedagogical (e.g. curricula, teacher training, educational materials, equipment, and student assessment) support for its implementation, based on the "*objectives*", referred to in paragraph 4 of the 1974 *Recommendation*, "*regarded as major guiding principles of education policy*" including: an international dimension and a global perspective on education, cultural diversity, interdependence, communication, rights and responsibilities, international solidarity and cooperation, and problem solving.

3. Today, the principles of the 1974 *Recommendation* apply equally well to Education for Sustainable Development (ESD) and to Global Citizenship Education (GCED) and therefore represent a powerful tool for promoting the 2030 Agenda for Sustainable Development and in particular SDG Target 4.7 on the promotion of sustainable development and global citizenship through education, Target 12.8 on access to information on sustainable development and Target 13.3 on climate change education.

4. The General Conference in its 39th session recommended the use of the 1974 *Recommendation* reporting process to support the implementation and monitoring of Target 4.7 of Sustainable Development Goal 4 (39 C/Resolution 79). The UNESCO Executive Board at its 209th session approved the use of the current guidelines for both the monitoring of the 1974 *Recommendation* and the collection of data needed for the following global SDG indicator for which UNESCO is custodian (209 EX/Decision 18.II):

4.7.1, 12.8.1 and 13.3.1: *The extent to which (i) global citizenship education and (ii) education for sustainable development are mainstreamed in (a) national education policies; (b) curricula; (c) teacher education and (d) student assessment.*

5. Questions marked with an asterisk (*) will be used in the calculation of the respective indicators (**Table 1**). As approved by the Inter-Agency and Expert Group on the SDG Indicators, the indicators will be calculated for primary and secondary education only.

Table 1 Questions used in the calculation of the global SDG indicator for Targets 4.7, 12.8 and 13.3

Policies	Curricula	Teacher education	Student assessment
A2, A4, A5, E1a	B2, B3, B4, E1b	C2, C3, C4, C5, E1c	D2, D3, E1d

B. Reporting obligations

6. The General Conference, at its 18th session, when adopting the *1974 Recommendation* recommended “*that Member States submit [...] reports concerning the action taken by them in pursuance of this recommendation*”. Moreover, in accordance with Article VIII of UNESCO’s Constitution “*Each Member State shall submit to the Organization [...] reports [...] on the action taken upon the recommendations and conventions referred to in Article IV, paragraph 4.*”

7. Thus, **all UNESCO Member States are expected to report on the steps they have taken to implement the 1974 Recommendation** preferably by completing the following questionnaire. Such reporting takes place every four years.

II. Guidelines for completion of the questionnaire

8. This questionnaire and its accompanying guidelines are addressed to Ministers responsible for relations with UNESCO. The questionnaire is typically completed by Ministries of Education and other government authorities responsible for education. Responses should cover, as far as possible, education at all levels of government, including sub-national levels where applicable as well as education outside the government sector.

9. National respondents are encouraged to **consult widely** both within, across and beyond government, including with Ministries of Environment, with national human rights institutions, the education sector, civil society partners and others, as necessary, to gather the information needed to complete the questionnaire.

10. Responses to the seventh consultation should cover:

- (i) the time period 2017-2020;
- (ii) education at all levels of formal education from pre-primary to tertiary education as well as non-formal education;
- (iii) all levels of government that have responsibility for education within the country; and
- (iv) where possible, education outside the government sector.

11. To assist countries in responding to this questionnaire, UNESCO has developed the following set of global citizenship education and education for sustainable development themes. The list is based on a review of current common practices in many countries as well as a review of relevant literature. While the terms ESD and GCED may be used differently in some countries, the list of themes typically captures what are seen as key elements of Target 4.7. Please refer to the definitions of key terms in **Section III** before completing the questionnaire.

Global citizenship education and education for sustainable development

- 1. cultural diversity and tolerance
 - 1.1 international or intercultural understanding, solidarity and cooperation
 - 1.2 intercultural and interreligious dialogue
 - 1.3 local, national and/or global citizenship
- 2. gender equality education
 - 2.1 gender-based equal opportunities
 - 2.2 gender equality and justice
 - 2.3 gender roles, identity and stereotypes

3. human rights education
 - 3.1 equality and non-discrimination based on race, colour, language, religion, disability, political or other opinion, national or social origin, birth or other status
 - 3.2 human rights values, human dignity, justice, inclusion and participation
 - 3.3 respect for human rights and fundamental freedoms (as outlined in international conventions and declarations)
4. peace and non-violence
 - 4.1 friendly relations among peoples and nations
 - 4.2 challenging negative stereotypes, promoting peaceful solutions, learning to live together, including others and preventing violent extremism
 - 4.3 preventing all forms of violence including bullying, verbal abuse and gender-based violence
5. climate change education
 - 5.1 mitigation
 - 5.2 adaptation
 - 5.3 impact reduction
 - 5.4 early warning
6. environmental sustainability
 - 6.1 caring for the planet, protecting nature
 - 6.2 environmental justice
 - 6.3 biodiversity, water
7. human survival and well-being
 - 7.1 environmental health as it pertains to human well-being, disaster risk reduction
 - 7.2 health of the planet for future generations
 - 7.3 sustainable cities and communities
8. sustainable consumption and production
 - 8.1 responsible and sustainable lifestyles
 - 8.2 green economy, green jobs
 - 8.3 sustainable energy

III. Definitions of key terms

Term	Definition
Themes of global citizenship and education for sustainable development	
1. Cultural diversity and tolerance	<i>Education about and for diversity including language, ethnicity, race, religion as well as the development of tolerance, mutual respect and appreciation for cultural diversity. It includes intercultural and interreligious dialogue, understanding, solidarity and co-operation, and citizenship education.</i>
2. Gender equality education	<i>Education that addresses the wider issue of gender equality by promoting new attitudes and patterns of belief, transforming the way people think about traditional gender roles and helping to build long-term sustainable change. It examines how gender roles, activities, needs, opportunities, rights and entitlements affect men, women, girls and boys differently. It deals with the relationships between females and males, their access to and control of resources and the constraints they face relative to each other. It respects the rights of all learners – women, men, boys and girls – equally and gives equal access to learning opportunities, resources and protections. All learners benefit from and are treated in education equally without the limitations set by stereotypes, rigid gender roles and prejudices. It covers gender-based equal opportunities, gender equality and justice, and gender roles, identity and stereotypes.</i>
3. Human rights education	<i>Education that promotes universal respect for and observance of all human rights and fundamental freedoms and thus contributes, inter alia, to the prevention of human rights violations and abuses by providing persons with knowledge, skills and understanding and developing their attitudes and behaviours, to empower them to contribute to the building and promotion of a universal culture of human rights.</i> <i>It includes equality and non-discrimination, human rights values, dignity, justice, inclusion and participation and respect for human rights and fundamental freedoms.</i>
4. Peace and non-violence	<i>Education about peace and peace-building, mediation, conflict prevention and resolution, non-violence, reconciliation and living together peacefully. It includes advocating for friendly relations among peoples and nations, challenging negative stereotypes, promoting peaceful solutions, learning to live together and preventing violent extremism and other forms of violence including bullying.</i>
5. Climate change education	<i>Education to help people, in particular youth, understand, address, mitigate, and adapt to the impacts of climate change. It encourages changes in attitudes and behaviours needed to put the world on a more sustainable development path, and build a new generation of climate change-aware citizens.</i> <i>It covers various responses to climate change including mitigation, adaptation, impact reduction and early warning.</i>
6. Environmental sustainability	<i>Education about responsible interactions with the environment to avoid depletion or degradation and to promote environmental quality and health. It includes, caring for the planet and protecting nature, environmental justice, biodiversity and water.</i>
7. Human survival and well-being	<i>Education that promotes social well-being and harmony including in future generations due to healthy environmental systems. It includes health of the planet and environment related to human well-being, disaster risk reduction and sustainable cities and communities.</i>

8. Sustainable consumption and production	<i>Education on the use and production of resources, products and services that have a minimal adverse impact on the environment. It promotes resource and energy efficiency, sustainable infrastructure and green jobs. It includes responsible and sustainable lifestyles, the green economy and sustainable energy.</i>
Dimensions of learning	
Knowledge	<i>Factual information and understanding acquired through study and/or experience.</i>
Skills	<i>The ability to carry out a task well as a result of training, practice and innate aptitude. Skills may be physical, mental or both.</i>
Values	<i>Principles that form the foundation on which individuals conduct themselves and interact with others and with the environment around them.</i>
Attitudes and behaviours	<i>Ability to act on the basis of beliefs and knowledge acquired through study or experience.</i>
Levels of education	
Pre-primary	<i>Education designed to support children's early cognitive, physical, social and emotional development and introduce young children to organized instruction outside of the family context. Participants are usually aged from three years.</i>
Primary and secondary	<i>Education designed to:</i> <i>(i) provide students with fundamental skills in reading, writing and mathematics (i.e. literacy and numeracy) and establish a solid foundation for learning and understanding core areas of knowledge and personal development (primary education); and</i> <i>(ii) prepare students for further education at post-secondary and tertiary levels and for entry into the labour market (secondary education).</i> <i>It includes both general and vocational education.</i>
Tertiary	<i>Education designed to provide learning activities in specialised fields of education. It aims at learning at a high level of complexity and specialisation. It includes both what is commonly understood as academic education and advanced vocational or professional education.</i>
Types of education	
Adult education	<i>Education specifically targeted at individuals who are regarded as adults by their society to improve their technical or professional qualifications, further develop their abilities, enrich their knowledge with the purpose to complete a level of formal education, or to acquire, refresh or update their knowledge, skills and competencies in a particular field.</i>
Formal education	<i>Education that is institutionalized, intentional and planned through public organizations and recognized private bodies which – in their totality – constitute the formal education system of a country. Formal education programmes are recognized by the relevant national or sub-national education authorities. Formal education consists mostly of initial education (e.g., pre-primary, primary, secondary and tertiary education).</i>
Non-formal education	<i>Education that is an addition, alternative and/or a complement to formal education within the process of the lifelong learning of individuals. It is often provided to guarantee the right of access to education for all. It caters to people of all ages but does not necessarily apply a continuous pathway-structure. It may be short in duration and/or low-intensity, and it is typically provided in the form of short courses, workshops or seminars. Non-formal education mostly leads to qualifications that are not</i>

	<i>recognized by the relevant national or sub-national education authorities or to no qualifications at all. Non-formal education includes programmes on life skills including literacy and numeracy, work skills, and social or cultural development. Most types of adult education are also included.</i>
Vocational education	<i>Education that is designed for learners to acquire the knowledge, skills and competencies specific to a particular occupation or trade or class of occupations or trades. Vocational education may have work-based components (e.g. apprenticeships). Successful completion of such programmes leads to labour-market relevant vocational qualifications acknowledged as occupationally-oriented by the relevant national authorities and/or the labour market. Vocational education can be offered at secondary and post-secondary or tertiary levels of education.</i>

IV. Information about the respondent

Country:

Slovenia

Organization:

Ministry of Education, Science and Sport

Date of submission:

8. 3. 2021

V. Other contributors consulted during the completion of this questionnaire

Please indicate below the names of other organizations and contributors consulted during the completion of this questionnaire.

Government institutions including other Ministries (please specify):

Ministry of Education, Science and Sport (Education Development and Quality Office, Directorate for higher education)

National Education Institute Slovenia (ZRSŠ)

The Slovenian Institute of Adult Education (ACS)

Institute of the Republic of Slovenia for Vocational Education and Training (CPI)

National School for Leadership in Education (Šola za ravnatelje)

Centre for School and Extracurricular Activities (CŠOD)

University of Ljubljana

University of Ljubljana, Faculty of Arts Ljubljana (department of Geography)

University of Primorska - Università del Litorale, Faculty of Education

University of Maribor: Head of Department for Development and Student Affairs

National human rights institutions (please specify):

--

Local and regional authorities responsible for education (please specify):

--

Other local and regional authorities (please specify):

--

Organizations representing education stakeholders (e.g. teachers, students, parents, etc.) (please specify):

--

Other civil society organizations (please specify):

SLOGA – Slovene platform of non-governmental organisations for development, global education and humanitarian aid

Association for Environmental Education FEE-Slovenia/int. Eco-Schools program

Others (please specify):

Slovenian UNESCO Schools (ASPnet Slovenia)

Slovenian Network of Health Promoting Schools (National Institut of Public Health)

VI. Questionnaire

A. Laws and policies (preamble and paras 4 and 7 of the 1974 Recommendation)

A1a. Please describe any specific national or sub-national laws, legislation or legal framework(s) in your country that govern the promotion of global citizenship education (GCED) and/or education for sustainable development (ESD). Explain whether GCED and/or ESD themes² are mentioned explicitly or are inferred and what types or levels of education are covered.

Existing fundamental legislation (some were also mentioned in 2013 report):

Constitution of Republic of Slovenia (GCED themes are explicitly mentioned in Chapter II, Human rights and fundamental freedoms, ESD inferred in Chapter III, Economic and Social relations, Articles 70-73).

Organisation and Financing of Education Act (all levels of education, specifically ISCED 1-3 and adult education). GCED and ESD themes are explicitly mentioned in aims of education (Article 2), e.g.

- to provide the optimal development of the individual, irrespective of gender, social background or cultural identity, religion, racial, ethnic or national origin, and regardless of their physical and mental constitution or disability;
- to educate for mutual tolerance, promote gender equality awareness, respect for human diversity and mutual cooperation, respect for children's and human rights and fundamental freedoms, foster equal opportunities for women and men, and thereby develop competences to live in a democratic society;
- to educate for sustainable development and active participation in a democratic society, including in-depth knowledge of, and a responsible attitude to, oneself, one's health, other people, one's own and other cultures, natural and social environments, and to future generations;
- to promote lifelong learning.

Kindergarten Act (pre-primary education; GCED themes are inferred in articles 3, 6, 7).

School Meals Act (pre-primary, primary and secondary education). The basic goal of the Act is "to ensure quality school nutrition, taking into account the principles of sustainable consumption, which influences the optimal development of pupils and students, the development of awareness of healthy nutrition and nutrition culture, education for a responsible attitude towards oneself, one's health and the environment, and enabling pupils and students to get access to healthy school meals" (Article 3).

Basic School Act (primary and lower secondary education). GCED and ESD themes are explicitly mentioned in aims of education (Article 2), e.g.:

- education and training for sustainable development and for active participation in a democratic society, which includes deeper knowledge and a self-responsible attitude, a responsible attitude to one's own and other people's health, a responsible attitude to one's own and other cultures, and a responsible attitude to the natural and social environment of future generations;
- development of national identity awareness and a sense of belonging to a state, including knowledge of Slovenian history and cultural and natural heritage, and fostering of civic responsibility;
- education for respect and cooperation, for acceptance of differences and mutual tolerance, and for respect for human rights and fundamental freedoms;

GCED themes are also inferred in Articles 7, 9, 10.

Gimnazije Act (general upper secondary education). GCED and ESD themes are explicitly mentioned in aims of education (Article 2), e.g.:

- developing awareness of national identity and belonging to a state, knowledge of Slovenian history and its culture,
- educating for the responsible protection of freedom, for tolerant, peaceful coexistence and respect for fellow human beings,

² See the schema described in paragraph 11 of Section II of these guidelines.

- developing and maintaining one's own cultural tradition and becoming acquainted with other cultures and civilizations,
- educating for the general cultural and civilizational values that originate from the European tradition,
- developing readiness to establish a free and democratic state providing social justice,
- encouraging an awareness of responsibility for the natural environment and one's own health,
- developing an awareness of the rights and responsibilities of a human and citizen,
- educating for sustainable development and developing creativity, innovation and risk acceptance, and the ability to plan and manage projects to achieve goals,
- encouraging lifelong learning, career planning and management.

GCED themes are inferred in Articles 9.

Vocational Education Act (upper secondary education). GCED and ESD themes are explicitly mentioned in aims of education (Article 2), e.g.:

- educates for sustainable development, entrepreneurship, innovation and creativity,
- promoting awareness of the integrity of the individual,
- develops awareness of national affiliation and national identities in the history of Slovenia and its culture,
- educates for the responsible protection of freedom, for tolerant and peaceful coexistence and respect for fellow human beings,
- develops and maintains its own cultural traditions and lists with other cultures and civilizations,
- raises awareness of responsibility for the natural environment and ultimate health,
- develops an awareness of the rights and responsibilities of man and citizens,

Higher Vocational Education Act. GCED and ESD themes are explicitly mentioned in aims of education (Article 2):

- develop awareness of the rights and responsibilities of persons and citizens;
- develop and foster awareness of affiliation to the state and national identity, and of the integrity of the individual, and develop and preserve cultural traditions.

Adult Education Act (non-formal education). GCED and ESD themes are inferred in Articles 2 (Principles), 4 (Rights) and 7 (Education programmes).

The programmes raising the level of the population's general education and culture, functional literacy programmes, programmes upgrading knowledge for employment and professional purposes, education and training of the unemployed, education for democracy, foreign language courses, Slovene language courses for foreigners, education for improving one's quality of life, minority education, the education of adults with special needs, adult education for special groups, and other forms of general adult education.

There are no specific higher education national laws, legislation or legal framework(s).

Slovenian Development Strategy 2030 was adopted by the Government of the Republic of Slovenia on 7 December 2017

"In order to become a society that understands how to deal with change, uncertainty and challenges, we want to create the conditions for and establish a systematic approach to sustainable development." (Slovenian Development Strategy 2030, p. 6) Further, it outlines the vision of the country: "In harmony with our environment and our era, we have achieved a balanced, high-quality standard of living. By learning throughout our lives, we are well-equipped to take on the biggest challenges. We are innovative and translate ideas into actions. We create positive relationships based on trust and are building a society of solidarity and tolerance. With confidence, we open Slovenia to partners willing to cooperate. We are proud that our cultural uniqueness makes a difference around the world."

The [Resolution on Development Cooperation and Humanitarian Assistance](#) of the Republic of Slovenia adopted in September 2017 states "Slovenia recognizes the role of **Global Education** in the eradication of poverty and implementation of Sustainable Development. Slovenia promotes

activities of Global Education for a better understanding of developments in the world, their causes and consequences, as well as correlations between local and global dimensions."

The [Development Cooperation and Humanitarian Assistance Strategy](#) of the Republic of Slovenia until 2030 adopted in December 2018 states "Slovenia recognizes the role of **Global Education** in eradicating poverty and inequality, achieving sustainable development, and educating active and responsible global citizens with a sense of solidarity. **Global education** involves a lifelong process of learning and action, reflecting the complex interdependence of global actions and developments and the individual's inclusion in these developments. As it consequently constitutes a significant element of development cooperation, the National Coordinator will continue to foster and enhance this concept in close cooperation with the ministry responsible for education. By doing so, Slovenia will implement SDG target 4.7, i.e..."

Global Education is included in a new strategic document in the field of children's rights, the [Programme for children](#) (*Program za otroke 2020-2025*), which sets out goals for improving children's wellbeing and opportunities and strengthening their protection and rights between 2020 and 2025. The subchapter on inclusive pre-school and school education recognizes Global Education of the key importance for an inclusive sustainable society and an important part of lifelong learning. It recognizes the importance of the inclusion of Global Education in pre-school and school education by placing it in the White Paper on Education (2011). One of the goals of the programme for children is to promote active citizenship of children and inclusion of Global Education in pre-school and school education.

Other legislation where GCED themes are inferred:

Act Regulating Special Rights of Members of the Italian and Hungarian Ethnic Communities in the Field of Education (amended in 2018)

Rules on the collection and protection of personal data in pre-school education

Rules on the Treatment of Domestic Violence for Educational Institutions. In accordance with the Slovenian legislation, providing a safe and encouraging learning environment is one of the fundamental objectives of education. It includes the strengthening of social skills, tolerance and respect of differences as well as enabling development and achieving the highest possible level of creativity.

Rules on norms and standards for the implementation of the primary school programme (amended in September 2019). The amendment refers to the normative regulation connected with the inclusion of immigrant students.

A1b. Please provide the full names of any laws, legislation or legal frameworks referred to in A1a and, where possible, web links to relevant documents.

A3a. Please describe any specific current national or sub-national education policies, frameworks or strategic objectives in your country that promote global citizenship education (GCED) and/or education for sustainable development (ESD). Explain whether GCED and/or ESD themes³ are mentioned explicitly or are inferred and what types or levels of education are covered.

The **White Paper on Education in the Republic of Slovenia** (2011) represents fundamental, systematic, professional reflection on the structure and operation of the Slovene education system, and proposes solutions assuring quality practice on the field of pre-school, compulsory basic, upper secondary, adult and music education. It includes human rights and responsibilities, autonomy, justice and quality as general principles of education. It also proposes how human rights education, citizenship education and education for peace should be taught. Chapter 3.7 focuses on Sustainable development.

The main national document intended to support the planning, implementation and evaluation of the ESD in formal, non-formal and informal education is the **Guidelines for Education for Sustainable Development from Pre-School to Pre-University Education**, prepared by the interdepartmental working group at the MESS in 2007 and is currently being updated.

The tertiary level of education does not have a similar national steering document. Universities and faculties are professionally autonomous in the design and implementation of study programmes; however, the criteria for accreditation of higher education institutions and their study programmes (carried out by NAKVIS - the National Agency of the Republic of Slovenia for Quality in Higher

³ See the schema described in paragraph 11 of Section II of these guidelines.priority.

Education) do not include specific requirements or quality standards that apply to the aspect of sustainable development.

The Resolution on National Higher Education Programme for 2011–2020 (NHEP) was adopted in 2011 and it introduced, in particular, the policy of structuring the studies, and binary options and diversification of higher education institutions, changes to the funding of higher education in view of the institutions and a student, redefinition of the part-time study, focus on quality, accessibility to higher education, and development of the internationalisation of the Slovenian higher education. Strategic objectives Cultural diversity and tolerance, Gender equality, Human rights are including under-represented groups of the population in tertiary education, Measure 44. The new National Higher Education Programme for the period 2020 onward is still in preparation. Strategic objective Environmental sustainability will be included in a planned project in the frame of the "Recovery and resilience facility".

Non-formal and informal ESD is set in the **Resolution on Adult Education Master Plan for 2013-2020** (ReNPIO) as one of 15 long-term goals and, on the implementation level, as one of the priority contents of adult programmes. The ReNPIO 2013-2020 has its operational framework in the Annual Plan for Adult Education, eg. the Annual Programme of Adult Education in the Republic of Slovenia for 2018, adopted by the Government of the Republic of Slovenia in July 2017; Annual Programme of Adult Education in the Republic of Slovenia for 2019, adopted by the Government of the Republic of Slovenia in August 2018. Slovenia is in the process to adopt the new ReNPIO for the period 2021-2030.

In July 2015, the National assembly adopted the **Resolution on the National Programme of Nutrition and Physical Activity for Health 2015–2025**. The National programme is a strategic and comprehensive frame aimed at improving the eating habits and physical activity of the Slovenian citizens, namely from early until later life. It defines specific and measurable goals, as well as measures in different key areas. Some of them have links to education, such as provision of healthy nutrition according to the guidelines and recommendation (organised meals in kindergartens, schools and student meals), physical activity in the education system, etc.

In November 2015, the National Assembly of the Republic of Slovenia adopted the **Resolution on the National Programme for Equal Opportunities for Women and Men 2015–2020**. One of its goals is reducing inequalities, overcoming stereotypical social roles in education, care and sport, and reducing segregation for sex in educational programs at all levels.

In order to ensure better education to Roma **The Strategy of Education of Roma in the Republic of Slovenia** (2004) was put forward. The strategy, which was again revised in 2011, was prepared in close collaboration with the Union of Roma of Slovenia.

The changes to kindergartens and schools at a comprehensive institutional level from the point of view of SD values and goals are also highlighted by various other horizontal (cross-sectoral) national SD documents, eg. the **Indicative programme for the transition to a green economy** (2015), which also mentions introducing a sustainable way of life and the functioning of educational institutions.

With help from external experts, in 2016 the National Education Institute Slovenia issued the **Instructions with a manual for the treatment of peer violence in educational institutions**, which were based on the "Guidelines for analysis, prevention and treatment/management of violence in the school space" (2004). The instructions are a useful list of procedures that should be applied when violence takes place.

In order to provide a safe and encouraging learning and working environment, the MESS has adopted key measures (policies, projects...) also in areas such as the inclusion (of children) of immigrants in the education system, the education of people with special needs and talented people, support mechanisms in education, education for members of ethnic communities. With the purpose of raising the awareness of the mentioned measures, a special website has been set up and relevant material has been published there. The content is intended for all types of people, particularly

professional staff, school management members and parents, so that they may find in one place useful information about how a safe and encouraging learning environment is provided in the education system in Slovenia, as well as legislative bases, useful expert material and cases of adequate resolution of various dilemmas when it comes to providing a safe and encouraging learning environment.

The Educational Research Institute in Ljubljana implements the wider project "Strengthening social and civic competences of professional staff" (2016-2021), which is co-funded with the funds. Two programmes are implemented as part of the project: "Facing the Challenges of Intercultural Coexistence" and "Only Others Make Us What We Are".

- The **Draft Programme for Work with Immigrant Children in Pre-school, Primary and Secondary Education** document has been created as part of the "Facing the Challenges of Intercultural Coexistence" programme. <http://www.medkulturnost.si/o-projektu-2/>
- The "Only Others Make Us What We Are" programme helps create inclusive school and class communities in educational organisations by raising awareness about the importance of respect of differences, intercultural cooperation and respectful coexistence in multicultural societies. <https://lezdrugimismo.si/sl/predstavitev-projekta-katalog-zgibanka>

End of December 2017 the **Decree on the methods and conditions for ensuring the rights of persons with international protection** came in operation. The decree specifies the education of persons under subsidiary protection who cannot provide evidence of their formal educational qualification.

Together with the National Education Institute Slovenia and the Trade Union of Education, Science and Culture of Slovenia, the Ministry of Education, Science and Sport first organised between March and May 2017 regional panels themed with establishing the situation and identifying challenges and good practices in providing a safe and encouraging environment in kindergartens and schools (with an emphasis on the issue of kindergartens and schools facing peer violence and other forms of violence), and then a national conference in December.

In the light of the goal of updating the existing national SD guidelines, the following planned short-term and medium-term measures are important: updating the Kindergarten Curriculum (ISCED 0), updating the curriculum of Environmental Education as ESD - with instructions for its implementation as a cross-curricular topic; from 2018 till 2020, a pilot introduction of the updated Extended Programme in Basic School (under which the SD topics are given much more attention than before) (ISCED 1, 2) is underway; consideration of the proposal of the civic education syllabus, including the international dimension and global education in general secondary education (ISCED 3); while in vocational and technical education, SD competence is being systematically incorporated into all updated and new programmes as a compulsory part of the vocational standard.

In December 2017, the Government of the Republic of Slovenia adopted a new umbrella development framework for the country, the **Slovenian Development Strategy 2030**, which puts the quality of life in the foreground. The basic development framework is sustainable development; at the heart of the new development model, there is one of the five main strategic orientations: "learning for and through life", which connects all others (an inclusive, healthy, safe and responsible society, a highly productive economy which creates added value for all, well preserved natural environment and a high level of cooperation, competence and governance efficiency). We are building a society of solidarity and tolerance.

The **Resolution on Development Cooperation and Humanitarian Assistance** of the Republic of Slovenia adopted in September 2017 states that Slovenia recognizes the role of Global Education in the eradication of poverty and implementation of Sustainable Development. "Slovenia

promotes activities of Global Education for a better understanding of developments in the world, their causes and consequences, as well as correlations between local and global dimensions."

In the [Development Cooperation and Humanitarian Assistance Strategy](#) of the Republic of Slovenia until 2030, adopted in December 2018, Slovenia recognizes the role of Global Education in eradicating poverty and inequality, achieving sustainable development, and educating active and responsible global citizens with a sense of solidarity. It states Global education involves a lifelong process of learning and action, reflecting the complex interdependence of global actions and developments and the individual's inclusion in these developments. As it consequently constitutes a significant element of development cooperation, the National Coordinator (Ministry of Foreign Affairs) will continue to foster and enhance this concept in close cooperation with the ministry responsible for education. By doing so, Slovenia will implement SDG target 4.7.

Global Education is included in a new strategic document in the field of children's rights, the [Programme for children](#) (*Program za otroke 2020-2025*), approved by the Government of the Republic of Slovenia on 5 November 2020, which sets out goals for improving children's wellbeing and opportunities and strengthening their protection and rights between 2020 and 2025. The programme identifies four priority areas of focus: equal opportunities for children, participation of all children, safety of children in a digital environment and a life without violence, and child-friendly procedures. The subchapter on inclusive pre-school and school education recognizes Global Education of the key importance for an inclusive sustainable society and an important part of lifelong learning. It recognizes the importance of the inclusion of Global Education in pre-school and school education by placing it in the White Paper on Education (2011). One of the goals of the programme is to promote active citizenship of children and inclusion of Global Education in pre-school and school education.

With the financial assistance of the Structural Reform Support Service at the European Commission (SRSS / S2018 / 041), the Ministry of Education, Science and Sport (MESS) and the Ministry of the Interior finalised the 2-year project "Preventing Bullying and reducing violence among minors in Slovenia", to which "violence against teacher" was added, as part of which the MESS carried out a national survey on the quality of mutual relations and various forms of violence among minors that may occur in schools. The main objective of these activities is improving the response of various relevant professional services to the issue of violence among minors and against teachers.

In relation to the implementation of various activities and projects in the areas of healthy lifestyle and safe and encouraging learning environment, let us mention at least [three international projects or networks in which a large number of Slovenian kindergartens and primary and secondary schools](#) are included, and increasingly frequently also higher education organisations (for example, the Faculty of Education of the University of Ljubljana is the first ECO faculty in Slovenia that is a member of the ECO school network): **Eco Schools**, **Healthy Schools** and **UNESCO Schools**. All three school networks and their activities that are exceptionally diverse and of very good quality certainly belong to **cases of good practices** in the field of education or sustainable development and global citizenship.

In February 2020, the Government of the Republic of Slovenia, according to the Governance of the Energy Union and Climate Action, adopted the **Integrated National Energy and Climate Plans** (NEPN). It applies to higher education, as well, in particular within the action of promoting training and staff building, as well as activities for the involvement of MESS and educational

institutions (universities, etc.), as well as in the instrument for the promotion of research and innovation in transition to climate-neutral society.

The Government authorised the integrated strategic project of decarbonisation of Slovenia in way of transition to circular economy, namely with the cooperation of the European Commission and European Institution of Innovation & Technology [EIT Climate-KIC](#). It will combine different fields and strategies. It is planned for the first phase to do the analysis of the higher education realm or study programmes, namely to determine to what extent the relevant contents have been integrated and to set up the proper facility (data warehouse) for analytics and commercial decision taking (cooperation with the Ministry of Public Administration). The interdepartmental project consists of several development programs, including the "Circular Schools" program, the basic goal of which is to implement the principles of the circular economy in the curricula of primary and secondary schools.

In March 2020, the Slovenian Government adopted the Climate Change Fund Resources Utilisation Programme 2020–2023. It applies among other things to education and training. Under legitimate utilisation purposes, it provides for learning aimed at sustainable transition, specifically through the action of adding the goals and contents of climate change in kindergarten and basic education programmes, upper secondary, short cycle higher vocational education and adult education programmes. The planned activities include the revision of national guidelines for education and training for sustainable development, education programmes, subject-curricula and other curricular documents with similar goals and contents. The described activities are planned within the measure "Climate goals and contents in education".

According to The EU Recovery and Resilience Facility (https://ec.europa.eu/info/business-economy-euro/recovery-coronavirus/recovery-and-resilience-facility_en), Slovenia is preparing Recovery and Resilience Plan for 2021-2026. It includes a major comprehensive reform of curricula renewal across the educational vertical, with a focus on digital and green content (strategic objectives: Environmental sustainability, Productivity, Fairness, Macroeconomic stability).

B. Curriculum (paras 4 and 10-19 of the 1974 Recommendation)

B1a. Please describe in which ways GCED and ESD are mainstreamed in school curricula. Indicate whether topics are taught as standalone subjects or are integrated into the curricula of other subjects. Explain whether GCED and/or ESD themes⁴ are mentioned explicitly or are inferred and what types or levels of education are covered.

These topics are part of the kindergarten curriculum (in all its basic fields: Society, Language, Art, Mathematics, Nature, Movement), of the compulsory and optional curricula of general education in basic and secondary schools (part of the syllabi of compulsory and optional subjects, optional activities) and of school activity days, open-air school, extra-curricular activities, project days and weeks, field trips and various projects where kindergartens and schools participate on the basis of their professional autonomy.

ESD is integrated into the national curriculum at all levels of formal education (early childhood, primary, lower secondary, upper secondary and vocational education).

ESD is integrated as a cross-curricular topic as well as the topic of some optional subjects in primary and secondary school (environmental studies, sport for health, civic culture, methods of eating, modern agriculture, beekeeping etc.) and optional activities at the level of upper secondary education (civic culture, education for peace, family and nonviolence, library information skills). Competence for sustainable development has been gradually and systematically included in recent years as a compulsory part of the vocational standard in vocational and professional education programmes. By 2025 it should be included in all occupational standards.

The modernization process will continue as part of a major comprehensive reform of curricula renewal across the educational vertical, with a focus on digital and sustainable content. The reform is planned for 2021-2026 (under the Recovery and Resilience Plan).

Pre-primary level:

The GCED and ESD content is included in the curriculum of the field society and nature, which is also sensibly and comprehensively connected with other fields defined in the document Curriculum for Kindergartens (<https://www.gov.si/assets/ministrstva/MIZS/Dokumenti/Sektor-za-predsolsko-vzgojo/Programi/Kurikulum-za-vrtce.pdf>). In addition to the Curriculum, the field of pre-school education is also regulated by other documents, such as, for example, Guidelines for the inclusion of immigrant children in kindergartens and schools (http://eportal.mss.edus.si/msswww/programi2019/programi/media/pdf/smernice/cistopis_Smernice_vkljucevanje_otrok_priseljencev.pdf) and the appendix to the Curriculum for kindergartens for Roma children and for work in bilingual areas.

Updating the current national Curriculum for kindergartens (1999). The National Education Institute Slovenia (ZRSŠ) carried out in 2018 an analysis in the field of implementation of the current national curriculum, and the process continued in 2019 with the drafting of starting points and guidelines for updating the national curriculum.

Primary education: There is no independent compulsory subject that would fully cover the GCED and ESD content in the syllabus for primary school, although content is included in various compulsory subjects. Even more so in the updated version, which is in the testing phase (2019-2021), ESD and GCED content is also present in the document Concept of after-school classes, which defines how after-school classes are organised. GCED and ESD content is also included in the Guidelines for the inclusion of immigrant children in kindergartens and schools

⁴ See the schema described in paragraph 11 of Section II of these guidelines.

(http://eportal.mss.edus.si/msswww/programi2019/programi/media/pdf/smernice/cistopis_Smernice_vkljucevanje_otrok_priseljencev.pdf) and other documents.

The updated Concept of the extended primary school programme will be introduced on a pilot basis in 20 schools in 2018-2021. The Institute for Education of the Republic of Slovenia is responsible for the preparation and testing of various models of the extended programme. The experiment is monitored by the Quality and Evaluation Council. The basic principle of experimenting with extended programme models is to enable all students to develop a healthy and holistic personality that follows their individual abilities, interests, talents, and needs. The updated concept of the extended program emphasizes two content sets of activities that should be systematically and more integrated than before in the activities of the extended primary school program, namely movement and health for mental and physical well-being, and culture and tradition.

Lower-secondary education:

The list of subjects at this educational level also determines optional subjects, such as, for example, environmental education, religions and ethics, Roma culture and civic culture. A cross-curricular document Environmental education as education for sustainable development has also been drafted. The term sustainable development is mentioned explicitly, as is the term civic education.

In **basic school** (ISCED 1, 2), SD topics are an integral part of a large number of compulsory subjects (for example, Environmental Education, Social Sciences, Natural Sciences on lower levels of basic school; Civic Education, History, Biology, Physics, Chemistry, Geography, Home Economics, etc.) and a wide variety of optional subjects, for example: Environmental Education I, II, III, Chemistry in the Environment, Life of Humans on Earth, Nutrition Methods, Projects in Physics and Ecology, Exploring the Home Town and Protecting Its Environment, Beekeeping, Philosophy for Children, Media Education, Citizenship Culture (including the international dimension), Modern Agriculture, Modern Food Preparation, etc.

Upper-secondary education:

There is no independent compulsory subject that would fully cover the GCED and ESD content in the syllabi for secondary school, although content is included in various compulsory subjects. The syllabus for secondary school also determines optional subjects, such as, for example environment and foreign languages: culture and civilisation, in which certain GCED and ESD content is included. The field of ESD is regulated by the cross-curricular document Environmental education as education for sustainable development. The syllabus for secondary school also includes compulsory optional content, and among them GCED and ESD are partially included in the content such as civic education and education on the family, peace and non-violence. The term sustainable development is mentioned explicitly, as is the term civic education.

A group of experts in civic education from the National Education Institute Slovenia drafted in 2019 a **proposal for syllabus (for secondary schools) or catalogue of knowledge (for vocational and professional secondary education) for the compulsory set of content "Active citizenship" with the purpose of integrating the content of active citizenship in the compulsory part of lessons also at the secondary education level** (civic education is taught at the primary school level as a compulsory subject)

The compulsory set of content Active citizenship, which includes the GCED and ESD content, will be implemented in all secondary school programmes in the Republic of Slovenia as of the 2022/2023 school year.

In February 2020, the Council of Experts of the Republic of Slovenia for general education and vocational and technical education passed the amended upper secondary education programmes. The programmes include a new component or other forms of educational activities: a compulsory set of contents on active citizenship, as well as non-compulsory contents in gimnazije and interest activities in vocational and technical education. Furthermore, the Council of Experts of the Republic of Slovenia for general education approved in February the subject-curriculum and catalogues of knowledge for the above set of contents. The revised programmes will come into operation in school year 2020/2021.

In school year 2020/2021, upper secondary schools started to use the modernised upper secondary programmes that include a new component, referred to as other forms of educational activities, which include selective content in the gimnazija programmes, and interest activities in vocational programmes, as well as the compulsory content 'active citizenship'.

At the level of **general secondary education** (ISCED 3), SD topics are also part of the compulsory timetable, while the elective part offers syllabi for Environmental Studies (optional subject), Ecology, Education for Peace, Family and Nonviolence, Health Education, Entrepreneurship, etc. (as compulsory optional content) and the syllabus for Environmental Education as Education for Sustainable Development (with instructions on the implementation of SDE as a cross-curricular topic).

At the level of **general secondary education** (ISCED 3), SD topics are also part of the compulsory timetable, while in the elective part one can find the syllabi for Environmental Studies (optional subject), Ecology, Education for Peace, Family and Nonviolence, Health Education, Entrepreneurship, etc. (as compulsory optional content) and the syllabus for Environmental Education as Education for Sustainable Development (with instructions on the implementation of SDE as a cross-curricular topic).

Also at the upper-secondary level, the plan is to update curricula with a focus on digitization and ESD content, which is planned as part of a major comprehensive reform of curriculum renewal across the educational vertical, planned for 2021-2026 (under the Recovery and Resilience Plan).

Tertiary education:

Faculties and universities are professionally autonomous in designing the content of their higher-education curricula. In the field of higher education programmes (either undergraduate and postgraduate programmes, or the first degree - diploma, the second - master's and the third degree - doctorate), the process of updating content, integrating new subjects, programmes and study courses is in the closest relation to the requirements and challenges of sustainable development.

GCED and ESD are highly embedded in **University of Ljubljana curricula** and its implementation is carried out in multiple ways. GCED and ESD topics are often taught as standalone subjects, are integrated into the curricula of other subjects or delivered as bachelor, master or doctoral degree programmes.

Standalone subjects cover different sustainable development themes (below we give a brief overview and examples of subjects taught, this is not an extensive list of all subjects):

- **social** (*human rights, minorities, inequality*: 70 subjects, e.g. Human Rights and Globalisation, International Protection of Human Rights, International Protection of Minorities etc., these subjects can be part of International Relations, Human Rights and Democratisation, Social work and other programmes; *gender studies*: 58 subjects, e.g. Sociology of Gender, Family, Women's Studies and Gender Studies etc., these

subjects can be part of Sociology, Preschool education and other programmes; *peace and non-violence*: 26 subjects, e.g. Peace studies, Identifying and preventing violence etc., these subjects can be part of Political science, Social work, Law and other programmes)

- **environmental** (*environmental sustainability, pollution*: 30 subjects, e.g. Marine Pollution, Environmental Aspects of Sustainable Development these subjects can be part of Maritime Studies, Urbanism, Ecology and other programmes; *climate change*: 3 subjects, e.g. Climate change, these subjects can be part of Biosciences and other programmes; *human survival and well-being, disaster risk reduction*: 25 subjects, e.g. Architecture and Sustainable Spatial Development, Sustainable City Development, Forests, people and sustainable landscapes etc., these subjects can be part of Architecture, Forestry and environmental engineering and other programmes)
- **economic** (*sustainable consumption and production*: 35 subjects, e.g. Sustainable Tourism Development, Sustainable and ecological product development, Corporate social responsibility, Environmental and natural resource management, International environmental negotiation etc., these subjects can be part of Design engineering, Environmental economics, Accounting, Marketing and other programmes).

Specific themes are usually mentioned explicitly, for some, we can infer the theme covered (e.g. the word “equality” is usually not mentioned in names of subjects covering gender issues). Some themes are not only covered as stand-alone courses but are also incorporated into various curricula (e.g. environmental sustainability is often part of energy, forest, ecology and other environmental studies).

Bachelor, master or doctoral degree programmes range across all fields of art, humanities, natural sciences and technology, are interdisciplinary or offer combination between disciplines and professional fields. Programmes covering sustainable development themes include: European Master’s Degree in Human Rights and Democratisation, Master’s Degree in Social inclusion and justice in the field of handicap, ethnicity and gender, Interdisciplinary doctoral programme in environmental protection, Doctoral programme in Biosciences and many others.

University of Ljubljana, Faculty of Arts (UL FF): The objectives of GCED and ESD are included in the existing curricula in the field of various geographical expert subjects: economic geography, regional geography subjects, urban geography, environmental protection and political geography. At the geography department of the UL FF, there are no courses that would be based exclusively on GCED and ESD.

University of Maribor: GCED and ESD are mainly integrated into the curricula of other subjects with GCED and ESD themes generally inferred within the subjects. GCED and ESD themes are explicitly mentioned within individual study fields and study subjects oriented towards the GCED and ESD content (e.g. subjects within the field of sociology, geography, agriculture, architecture, engineering, biology, law etc.). One standalone subject “Human Rights Education” is offered as a selective subject (ECTS accredited extracurricular activities) to all University of Maribor students.

University of Primorska (UP): Themes related to GCED and ESD are included in general competences of the graduates of the study programmes Pre-school education and Primary school teaching. The specification of the mentioned general objectives is reflected in two ways:

1. as independent subjects (students of the Pre-school education course meet with the following subjects that are indirectly connected to the GCED and ESD topics: Education for diversity and social justice, Diversity and equal opportunities in education, Interculturality in education. As part of the post-graduate study programme Primary school teaching, students may choose the subject

Multiculturalism in education, Human in inter-cultural space, Human and natural environment and Diversity and nature protection.)

2. as individual content of subjects (Individual GCED and ESD content may be found in the following subjects of the Pre-school education study programmes: Basics of pedagogy, Early learning of natural sciences, Learning how to read nature, Natural sciences, Social sciences in kindergarten, Natural science projects, Sociology of family.)

GCED and ESD content appears in individual subjects in the Primary school teaching study programmes, namely: Basics of pedagogy, Social sciences I and II, Natural sciences I and II and Sociology of family.

As an **example of the inclusion of contents and subjects in the field of SD at the higher-education level**, data from the two main Slovenian pedagogical faculties (of the University of Ljubljana and the University of Maribor) collected for the purpose of this questionnaire are given. These are the contents of SD which are included in the higher (initial) education programmes for teachers, or in the programmes of continuous professional development carried out by the faculties for teachers or professional staff in the field of education who already work in kindergartens and schools. The **Faculty of Education in Maribor** gives an example of an optional subject for students (Master's Degree) entitled Action Research in Environmental Education (academic year 2018/2019), and the following educational programmes for professionals in kindergartens and schools: Let us explore in nature (2018/2019), The pupil becomes acquainted with substances through experimentation (2016/2017), Lessons in environmental education outside the classroom (2015/2016), etc. The **Faculty of Education in Ljubljana** reports that SD topics are addressed in various subjects, most notably in Environmental Education, Environment and Sustainable Development, Natural Heritage Protection, Population and Environment, and Consumer Education. Courses are taught at Levels 1 and 2. The subject Environment and Sustainable Development is provided in English and can also be selected by Erasmus students. The contents are intended for the education of future teachers who should acquire competences in the field of sustainable development, understanding environmental problems and the sustainable behaviour of individuals and society. Various activities are carried out throughout the year. Studies on the perception of ESD are also carried out among students of pedagogical programmes. In particular, it should be mentioned that the Faculty of Education in Ljubljana is the **first Eco-faculty in Slovenia** (it joined the Eco-Schools Slovenia programme in academic year 2013/2014), which means that **SD contents are not only part of lectures and formal study obligations, but also a way of life of the faculty as a whole.**

The Centre for School and Outdoor Education (CŠOD) integrates GCED themes, especially ESD themes, into all its programmes, which include various outdoor learning programmes, most notably School in Nature and Activity Days in the 25 residential centres and numerous other locations throughout Slovenia. Their focus is mainly on the relationship between humans and nature, the various ways we influence each other and the balance that we need to maintain to preserve the wealth of life on Earth.

Non-formal education is understood as a particularly strong and relevant framework for SD due to its complexity and local embeddedness. The **Slovenian Institute for Adult Education** has developed **Basic Training for Sustainable Development** and corresponding learning materials, funded by the European Social Fund a decade ago. Since then it has been organised periodically.

Some handbooks by Slovene NGOs on how to include GCE in formal education subjects

have been developed, as well as some analysis and reviews on GCE inclusion in the formal education system. NGOs are also regularly providing trainings, seminars, workshops, conferences, clubs and motivational days for teachers on GCE. GCE handbooks, tools and methods are developed and/or updated and promoted to teachers.

GCE is strongly present in non-formal education. Activities are implemented by the NGOs and are often co-funded by the Ministry of Foreign Affairs, the Ministry for Environment, the Ministry for Internal affairs, the Government Communication Office and European Commission, winning many international prizes, awards and recognitions.

Experts, working in NGOs, are recognized as key experts for GCE in Europe and are regularly invited to participate at conferences and high level events. Slovene NGOs have also been among most wanted partners in DEAR (Development Education and Awareness Raising programme) projects with high rate of getting funds from the EC (in the last 4 years 14 DEAR projects had partners from Slovenia).

With the aim of getting GCE recognized and GCE activities in non-formal education implemented for all age groups, Slovene NGOs have been working with different partners such as youth centres, libraries, Slovene Institute for Adult Education, young entrepreneurs, regional hubs, Adult Education centres, municipalities, refugee centre ...

SLOGA Platform is, among other, network of NGOs working in Global Education and has an active GCE working field group that meets regularly, several times a year.

From 2006, SLOGA is a national coordinator of Global Education Week, which is coordinated by [the North – South Centre of Council of Europe](#). Each year in the third week of november up to 110 activities were implemented. In November 2020 the 14th edition of GEW was implemented.

SLOGA is an active member of Global Education networkers (Networking for Global Citizenship with [the North-South Centre of the Council of Europe](#)), The South-East Europe and Mediterranean Regional Group, The Balkan countries group (by [the North – South Centre of Council of Europe](#)); an active member of GCE hub at [CONCORD Europe](#) (European Confederation of Relief and Development NGOs); a member of [Bridge 47 Network](#); a [World Best News](#) partner for Slovenia; a member of [EADI](#), the European Association of Development Research and Training Institutes; a national thematic coordinator for Global Education at Lifelong Learning Weeks festival, coordinated by Slovene Institute for Adult Education (more than 340 GCE events in 2019 edition).

NGOs have produced handbooks for educators in non-formal education sector. Some handbooks by NGOs on how to include GCE in formal education subjects have been developed, as well as some analysis and reviews on GCE inclusion in the formal education system. They also regularly provide trainings, seminars, workshops, conferences, clubs and motivational days for teachers on GCE. GCE handbooks, tools and methods are developed and/or updated and promoted to teachers. NGOs are also active in the advocacy for GCE on national, European and global level.

International nominations and awards:

- Envision 4.7 (Bridge 47, SLOGA) won the silver Facilitation Impact Award 2020.
- Global Education Agora (Association Lojtra) EIU/GCED won Best Practices 2019 by UNESCO APCEIU - Asia-Pacific Centre of Education for International Understanding under the auspices of UNESCO.
- Club of global education teachers (Association Humanitas) won GENE Global Education Innovation Award 2018.
- Global education Agora - practicing global education on the street (Association Lojtra)

- included in [20 innovative Global Education initiatives](#) GENE 2018.
- Escape and Flight (Forum for Equitable Development/Forum za enakopraven razvoj FER) - presented in [32 innovative Global Education initiatives 2017 GENE Global Education Innovation Award Brochure](#).
- Through the Refugee's Eyes (Association Humanitas) presented in [32 innovative Global Education initiatives 2017 GENE Global Education Innovation Award Brochure](#).
- [No Excuse Slovenia](#) - was nominated for the 2019 [UNESCO-Japan Prize on Education for Sustainable Development](#) (ESD), which rewards outstanding projects as of UNESCO's wider work on [ESD](#).

Association DOVES – FEE Slovenia has been introducing and implementing the non-formal programs for education for sustainable development and global education in Slovenia: Eco-Schools (from 1994), Young Reporters for the Environment (from 2010) and LEAF – Learning About Forests (from 2010). It represents the largest network of mentors (teachers, professors) and youngsters from kindergartens to universities (pre-primary to tertiary) in Slovenia and globally that stimulates and empowers teachers and youngsters as well as coordinates the implementation of sustainable themes into the curriculum and extra-curriculum activities through daily school life. The program is based on the 7-step methodology representing the framework for each institution included to plan and implement sustainable education themes and activities each school year. The 7-step methodology is designed to enable each institution involved to plan and implement activities in a democratic, interactive, experience-based and solution-oriented principles. It also stimulates institutions to plan activities with regards to the local and global perspectives.

B1b. Please provide examples of curricula in which GCED and/or ESD are mainstreamed and, where possible, web links to relevant documents.

An example of a curriculum for the **subject society** (grades 4 and 5 of primary school) (https://www.gov.si/assets/ministrstva/MIZS/Dokumenti/Osnovna-sola/Ucninacrti/obvezni/UN_druzba_OS.pdf)

- The definition of the subject says that: "The emphasis and purpose of the subject is to learn about the relationship between an individual, society and natural environment. It revolves around learning about and evaluating the environment (social, cultural and natural) in all its elements and interaction and inter-dependence between these elements." (Ibid: 4).
- General objectives of the subject: Within the subject, students develop: understanding about their social, cultural and natural environment in time and space, awareness about interaction and inter-dependence of cultural, social and natural processes and phenomena and importance of sustainable development, social, communicational and research skills and competences that, in addition to knowledge, enable them to act successfully in the environment, viewpoints and values as part of environmental, citizenship and homeland education and education for democracy and human rights, cognitive, emotional and social competences and skills (logical and critical thinking, creativity, effective strategies for solving problems, etc.) and lifelong learning strategies (social and civic competences, communication in the native language, self-initiative and entrepreneurial skills, digital literacy, learning to learn, cultural consciousness and expression, etc.). (Ibid: 5)
- Content set: PEOPLE IN SOCIETY: learning about the fundamental human and children's rights, duties and responsibilities, developing understanding of the importance of cooperation between people; learning about the ways and forms of cooperation, competition and conflict resolution, learning about social differences between people, inclusion and exclusion of certain groups, judging about how technological and social development affects the environment and the quality of human lives; learning about the meaning of the term sustainable development,
- Content set: PEOPLE IN SPACE: learning about the importance of action and planning from the aspect of sustainable development

- OPERATIONAL OBJECTIVES AND CONTENT: learning about the importance of having a critical attitude towards consumerism; page 7) – 4th grade
- CONTENTS: CHILDREN'S RIGHTS (human rights and duties) – 4th grade: knowing and understanding the fundamental children's rights, duties and responsibilities (to themselves and others); recognising how human and children's rights and duties are exercised by means of examples (in Slovenia and elsewhere, today and in the past); understanding the importance of accepting and respecting differences; recognising types of violence among children and against children; learning about and using various strategies to control emotions, making decisions and solving various problems, for example: inter-personal, intellectual, etc.

An example of syllabus for the subject: **homeland and citizenship culture and ethics** (7th and 8th grade, primary school)

(https://www.gov.si/assets/ministrstva/MIZS/Dokumenti/Osnovna-sola/Ucninacrti/obvezni/UN_DDE_OS.pdf). Examples of operational objectives:

- Students recognise their affiliation to groups and communities. In doing so, they learn about the difference between biological gender and gender as defined by society and culture.
- Students develop the ability to examine differences in the community and between communities. They understand how important mutual tolerance of its members is for the community. They learn about and adopt strategies and procedures that enable cooperation and peaceful resolution of conflict. They understand how perception of others and different ones are developed. They learn about stereotypes and prejudice in media reports and everyday life and develop a critical attitude to them. They learn about the importance of tolerance and mutual respect for the culture of coexistence. They understand the importance of dialogue, cooperation and solidarity.
- They develop the value orientation on which democracy is based.
- Students learn about the main reasons why a large share of humankind is striving for human rights to be implemented.
- Students learn about the development of the idea of human rights. They learn about the documents that protect human rights; they learn about their history.
- Students develop competences for ethical thinking and understand the value orientation on which human rights are based.
- Students recognise the main ethical principles incorporated in definitions of human rights.
- Students recognise human rights in the Constitution of the Republic of Slovenia. They learn about the ethical principles incorporated in the Slovenian Constitutions.
- Students learn about the state of human rights in Slovenia by means of examples.
- Students develop sensitivity to human rights violations and become motivated to protect them. They develop the ability to present arguments that are based on the ethical principles incorporated in human rights.
- Students develop their own value orientation. They develop the ability to assess whether the rights included in the Constitution are implemented in everyday life. They become acquainted with institutions that protect human rights.
- Students learn about the principles incorporated in definitions of children's rights. They become acquainted with the procedures of protection of human rights and institutions that protect them. They understand the distinctiveness of children's rights.
- Students learn about activities and movements for resolution of issues (for example, assistance to people affected in wars or accidents, technological solutions, organisations such as Greenpeace, etc.). They develop motivation and viewpoints to activities and movements.

An example of syllabus and catalogues of knowledge for the **compulsory content set active citizenship** (secondary schools, 3rd grade)

(http://eportal.mss.edus.si/msswww/programi2020/programi/media/pdf/aktivno_drzavljanstvo.pdf, http://eportal.mss.edus.si/msswww/programi2020/programi/media/pdf/aktivno_drzavljanstvo.pdf)

[ssi.pdf](#), http://eportal.mss.edus.si/msswww/programi2020/programi/media/pdf/aktivno_drzavljanstvo_spi.pdf). Examples of objectives for secondary school programmes:

- Human rights and coexistence: By means of activities and authentic tasks, students: learn about various types of (human) rights and their relationship with freedom and authorities, they understand the connection between human rights and responsibilities, they are trained to participate in a public debate, to think about and argue their own views, accept differences in views, listen to other people's views and jointly look for (compromise) solutions, recognise the negative consequences of stereotypes, prejudices, intolerance, exclusion and discrimination, explore the importance of different types of affiliation (national, ethnic, religious, etc.); patriotism and cosmopolitanism.
- World and globalisation: By means of activities and authentic tasks, students: learn about changes in international relations (shifts in centres of economic and political power, the role of cultural globalisation and international organisations), analyse and critically assess various effects and processes of globalisation and their impact on their lives, recognise and evaluate the causes and consequences of conflicts and wars in a globalised world and discuss the efforts for democracy, peace and prevention of conflicts, assess the causes and consequences of global migrations and the importance of global organisations (The World Trade Organisation, The UN, etc.), raise their awareness about the importance of sustainable development and inter-cultural relations, study and plan activities for the protection of human rights.

An example of syllabus for the subject biology (8th and 9th grade of primary school)

(https://www.gov.si/assets/ministrstva/MIZS/Dokumenti/Osnovna-sola/Ucni-nacrti/obvezni/UN_Biologija.pdf), Human impact on nature and the environment

CONCEPT: Human activities may include the risk of potentially adverse effects on humans and the environment. Hazardous activities include the use of natural resources and extraction of raw materials, the growth of cities, changes of land use and waste management.

Students:

- understand that biodiversity is preserved by means of the direct protection of the entire environment and biosphere in general, sustainable use of landscape and sustainable development, exceptionally and in particular in protected areas; learn about the purpose of relevant (Slovenian and international) legislation,
- understand the human impact on biotic systems (organisms, ecosystems, biosphere) and explore this impact in their local environment (urbanisation, excessive use of natural resources, degradation and fragmentation of ecosystems, environmental pollution, etc.),
- understand sustainable development principles, contribute with their action to sustainable development in their local environment and become actively involved in raising awareness about these issues,
- learn that important personal and social decisions are based on an analysis of (economic and nature protection) risks and benefits, and that an individual benefits themselves by benefiting the community (environment as a value),
- learn that sustainable development demands that standards are established for monitoring changes in the soil, water and atmosphere and for preventing detrimental changes,
- learn that the risk related to human activity is a personal and social challenge, as an incorrect analysis of the consequences of certain activities leads to the risk being underestimated and, consequently, to detrimental consequences to humans and the environment or to too strict preventive measures, which is an unnecessary financial burden on the individual and society.

An example of syllabus for the subject **natural sciences** (6th and 7th grade)

(https://www.gov.si/assets/ministrstva/MIZS/Dokumenti/Osnovna-sola/Ucni-nacrti/obvezni/UN_naravoslovje.pdf), Human impact on the environment

- The importance of the exploitation of natural resources and energy (for example, students learn that environmental criteria need to be taken into account in addition to economic ones when the efficiency and consequences of exploitation of natural resources are evaluated.

- Waste management
- Humans alter ecosystems (for example, students understand that biodiversity is maintained by means of indirect protection of the entire environment and biosphere in general, sustainable use of landscape and sustainable development, in particular in protected areas.
- Humans pollute the air, water and soil (for example, students learn about the causes for the increase in gas emissions (carbon dioxide, methane, nitrogen oxides) and the related excessive warming of the atmosphere, which is reflected in change in climate and of land and water ecosystems.

An example of syllabus for the subject **biology** (secondary school)

http://eportal.mss.edus.si/msswww/programi2018/programi/media/pdf/ucni_nacrti/UN_BIOLOG_IJA_gimn.pdf, Ecology

CONCEPT: Humans live in various ecosystems that they increasingly change due to the growth in population, technology and consumption. Humans may cause major changes in ecosystems and decline in biodiversity. Major changes in ecosystems may exceed the ability of organisms to naturally adapt to changes, or the ability of humans to adapt themselves technology-wise to these changes.

Students:

- learn that the increasing consumption by humans is increasingly affecting the natural processes that restore certain resources, and exhausting resources that are not restored, and that the sensitivity of human society to changes in climate and ecosystems has increased with the growth of human populations and settling of almost the entire planet;
- evaluate the need to plan sustainable development, use of renewable natural resources and sustainable management of ecosystems;

An example of syllabus for the subject **Slovenian language** (primary school),

(https://www.gov.si/assets/ministrstva/MIZS/Dokumenti/Osnovna-sola/Ucni-nacrti/obvezni/UN_slovenscina.pdf)

- Literature: ... Reading provides students with the opportunity to create a personal and ethnic identity, to expand their horizons and learn about their culture and cultures of other peoples in the European cultural space and wider. By learning about other cultures and common cultural values, they build an inclined attitude to others and different ones. This way they develop their social, cultural and inter-cultural capacity and better understand the context of the period to which the discussed artistic texts refer to.
- Language: With their objectives, content and activities, language lessons are created in a way that enables the teacher to connect them with linguistic, natural science and social science subjects; students thus get to know the trans-curricular role of Slovenian as the teaching language. It is desired that the teacher also responds to the current situation in the class, school and society – this means that they encourage students to express their desires, expectations, experience, needs and opinions, and to frequently present to them and comment on current linguistic events that they may find interesting, although they may not be envisaged in the syllabus or connected with the current teaching objective or content. In this way the teacher actualises the lesson and builds the consciousness in students so that it makes sense and is practical to learn Slovenian.
- The teacher should steer the conversation so that students are able to form in a safe and relaxed atmosphere a positive relationship with their first language and to Slovenian (if it is their first language), while also developing respect and inclination to other languages and ethnicities and inter-cultural capacity. They should respond to the realistic situation in the class, school and society – they should take into account the fact that there are students in the class or school whose first language is not Slovenian; they should raise the awareness of all students about the importance of preserving their linguistic, cultural and ethnic identity and their respect, and the respect of others and of differences.

An example of syllabus for the subject **Slovenian language** (secondary school)

http://eportal.mss.edus.si/msswww/programi2018/programi/media/pdf/un_gimnazija/un_sloven_scina_gimn.pdf

- Literature: By classifying texts, students systematically learn about the development of Slovenian literature and concurrent genres, about authors and works of world and European literature and develop their inter-cultural capacity by means of text and context comparison, evaluations and connections between subjects.
- Language: General objectives of the subject Slovenian language in secondary education include cross-curricular content, such as civic culture, ICT, library information knowledge, environmental education, health education, consumer education, professional orientation, transport education, etc. and culture education content.

An example of syllabus for the subject **sport** (primary school)

https://www.gov.si/assets/ministrstva/MIZS/Dokumenti/Osnovna-sola/Ucni-nacrti/obvezni/UN_sportna_vzgoja.pdf

General objectives:

- healthy lifestyle (proper conditioning; body care; healthy nutrition; relaxation; balance between learning, sport activity, rest and sleep; immunity to illnesses; ability to sustain stress; neutralising the negative effects of modern lifestyle),
- positive attitude to sport that enriches an individual:
- creating a genuine, emotional, respectful and cultured attitude to nature and the environment as a special value,
- creating positive behavioural patterns (encouraging mutual cooperation, tolerance and acceptance of differences, developing healthy competitiveness and respecting sportsmanlike behaviour – fair play).

Operational objectives

1st education period (EP): they create positive behavioural patterns (tolerant and friendly behaviour in a group, respecting rules in games and sport behaviour, responsible handling of sport equipment, responsible attitude towards nature and the environment).

2nd EP

- they create positive behavioural patterns (persistence, self-confidence, cooperation and assistance, tolerance, acceptance of differences, respecting sport behaviours, protecting school property and sport equipment, raising awareness about nature protection),
- they understand the importance of protecting natural and cultural heritage.
- they learn about and understand the preventive role of sport in raising awareness about various forms of addiction (smoking, alcohol, drugs, etc.) and other pathological phenomena in modern society (violence, suicide, etc.),

3rd EP

- they learn about and understand the preventive role of sport in raising awareness about various forms of addiction (smoking, alcohol, drugs, etc.) and other pathological phenomena in modern society (violence, suicide, etc.),
- they learn about ecological issues related to sport activities,
- they have their own viewpoints about negative sides of modern sport (doping, commercial products and services, etc.).

An example of syllabus for the subject **sport education** (secondary school)

(http://eportal.mss.edus.si/msswww/programi2018/programi/media/pdf/un_gimnazija/un_sportna_vzgoja_gimn.pdf)

General objectives:

- encouraging mutual cooperation, self-confirmation, healthy competitiveness, respect of sportsmanlike behaviour (fair play), tolerance and acceptance of differences,
- Accepting responsibility for a cultured attitude towards nature and the environment: respecting natural and cultural heritage.

Basic programme:

- creating a responsible attitude towards their own health (regular sport activity in school and in free time, body care, healthy nutrition, rejecting addictions),
- developing a cultured attitude towards nature and the environment,
- Optional sport programme:
- encourage mutual cooperation, healthy competitiveness and acceptance of differences, develop a cultured attitude towards nature and the environment.

An example of syllabus for the subject **sociology** (secondary school)

http://eportal.mss.edus.si/msswww/programi2013/programi/media/pdf/ucni_nacrti/UN_SOCIOLOGIJA_gimn.pdf, Science – social development and environmental issues

In the chapter, emphasis is put on an analysis of the role and importance of science in modern society, problematisation of the importance of development of science, technology and social progress from the aspect of possibilities for sustainable development of society, evaluation of the relationship between science and knowledge and the use of knowledge, positive and negative sides of the use of knowledge and the ability of the public to decide on the use of scientific achievements.

Goals: Students:

- understand the multi-faceted nature of science as a cognitive and legitimising system
- problematise the autonomy of science and professionalisation of science and analyse social responsibility of scientists
- develop the understanding of development of science and technology as contradictory development
- analyse the consequences of an unchanged manner of development in the light of the growing ecological crisis (in relation to health, lifestyle and quality of life, economic development, equality of access to natural resources)
- problematise the concept of sustainable development and the question of new ecological ethics
- weigh the possibilities for participation of the public in steering the development of science and its use
- weigh the ethical problems of science and use of science

An example of syllabus for the subject **mathematics** (primary school)

https://www.gov.si/assets/ministrstva/MIZS/Dokumenti/Osnovna-sola/Ucni-nacrti/obvezni/UN_matematika.pdf

- It is written among other things in the general objectives that students accept and experience mathematics as a cultural value.
- In connection with natural science subjects, we encourage natural sciences and mathematics capacities for the development of complex thinking and relationship and decision-making competence: ability for responsible and active participation in solving problems and in sustainable development.

An example of syllabus for the subject **mathematics** (secondary school)

http://eportal.mss.edus.si/msswww/programi2018/programi/media/pdf/un_gimnazija/un_matematika_gimn.pdf

- Culture education is an integral element of all subjects, including mathematics. As a central element of lifelong learning, it significantly contributes to the comprehensive development of the personality of every individual. It is of key importance that the freedom of the creator and receiver is respected. It enables an individual to understand the importance and learn about the culture of their own nation and gain awareness of their affiliation to this culture. We encourage awareness about the importance of contribution of Slovenians to the culture of mathematics, respectful attitude to other cultures and inter-dialogue. In connection with mathematics, the teacher enables students to empirically

learn about various fields of culture: music, fine arts, theatre, dance, film, reading culture and cultural heritage.

- In connection with natural science subjects, we encourage natural sciences and mathematics capacities for the development of complex thinking and relationship and decision-making competence: ability for responsible and active participation in solving problems and in sustainable development.
- A student critically reflects their own knowledge (learning to learn); constructively controls emotions, respect themselves and fellow human beings, develops integrity (fairness and openness), develops capabilities to work in groups, responsible attitude and values, develops and improves the critical and fair attitude to the world (social and civic competences).

University of Ljubljana:

- International Protection of Human Rights (<https://www.fdv.uni-lj.si/en/news-and-information/subjects/10078>) course (The course introduces students to the concept of human rights, history of human rights protection and of international protection of human rights, analysis of the principles of universality and indivisibility of human rights, analysis of the principles of international law on friendly relations among states from the perspective of the development and functioning of the international regime for human rights protection. The purpose of the course is, for students to learn and understand human rights as well as mechanisms and politics of human rights protection in the contemporary international community and to monitor and assess critically the development of human rights protection in the framework of structure of the contemporary international community. Learning and teaching methods: Lectures, seminars, presentations of research results, discussions, detailed analyses of primary documents on human rights, presentation and analysis of documentaries, discussions with practitioners, participation at human rights events at the faculty and elsewhere.)
- International protection of environment (<https://www.fdv.uni-lj.si/en/news-and-information/subjects/9205>) course (The course introduces students to the ever-more pressing issue of environmental protection in the international community. This course

aims to explore the legal and policy dimensions of the EU action in the field of environment, taking into account and highlighting close interactions between its internal and external dimensions. The aim of the course is to provide students with insights on processes and relations among actors in the field of international protection of environment. EU and national perspectives will be employed to study environmental governance. Learning and teaching methods: Lectures, Individual/group work.)

- Corporate Social Responsibility (http://www.ef.uni-lj.si/content/static_english/predmet/predmet.asp?l=123&li=2421&predmet_id=196361) course (Students are introduced to corporate social responsibility and corporate sustainability concepts, trends, issues and theoretical schools and the Corporate Sustainability Model. Graduates understand the role of ethical theories in CSR development, key challenges of modern management and business practice and challenges in developing and implementing CSR/corporate sustainability projects, are able to develop program logic models for CSR/corporate sustainability projects and design strategy maps, develop and implement field study tools. Learning and teaching methods: Lectures, project (workshops), training, discussions, guests from the practice).
- Environmental protection (<https://www.uni-lj.si/study/doctoral/environmental-protection/>) programme (Interdisciplinary education of highly qualified professionals who will be able to solve complex problems with an interdisciplinary approach. Includes courses like: Ecology with nature conservation, Economic and Law of Environmental Management, Environmental chemistry and technology, Crisis management, Disaster medicine, environment, health, and wellbeing, Environmental and sociological aspects of sustainable development, Seismology and earthquake engineering, Risk Management, The Interdisciplinary Aspects of Rural Areas Protection and more basic or elective courses. The main emphasis of the programme is the students' research work.)

University of Maribor:

- Standalone subject "Human Rights Education" is offered as a selective subject (ECTS accredited extracurricular activities) to all University of Maribor students: https://moja.um.si/student/Documents/Call%20KOOD_2021_en.pdf
- Faculty of Agriculture and Life Sciences, study programmes: 1st cycle study programme Organic Farming, 2nd cycle study programme Food Safety (<http://www.fkbv.um.si/en>)
- Faculty of Natural sciences and Mathematics, 1st cycle and 2nd cycle study programme Ecology with nature conservation, 3rd cycle study programme Ecological Sciences (<https://www.fnm.um.si/index.php/en/presentation-of-studies/>)
- Faculty of Mechanical Engineering, 1st, 2nd and 3rd cycle study programme Environmental Engineering (<https://www.fs.um.si/en/study/study-programme/>).

Since 2019, all new **Centre for School and Extracurricular Activities (CŠOD)** programmes are required to include an ESD component. In 2020, CŠOD programmes were updated to include a focus on ESD.

3.3 respect for human rights and fundamental freedoms (as outlined in international conventions and declarations)	1	1	1	1

C. Teacher education (including the training of trainers and educators) (paras 4 and 33-37 of the 1974 Recommendation)

C1a. Please describe in which ways GCED and ESD are mainstreamed in initial training and in continuing professional development of teachers, trainers and educators. Indicate whether all teachers, trainers and educators or only some are required to receive training to teach GCED and/or ESD.

The Ministry of education publishes in-service programmes each year and co-finance them on the basis of mandatory evaluations of the programme implementation (by interviewing participants in the programme). The offered programmes are published in the **Catalogue of programmes for further education and training of professional workers in education**. The catalogue is publicly available on the MESS website (in Slovenian):

<https://paka3.mss.edus.si/katis/Uvodna.aspx>. It is worth mentioning that, in the tender from spring 2018 (for school year 2018/2019), the MESS defined **seven priority topics of further education, including the ESD topic**. In the tender for the school year 2020/2021, the ESD is set as one of the most important criteria in the evaluation and selection of programs for publication in the above-mentioned Catalogue. In the following years, ESD is explicitly highlighted as a priority topic for the publication of programs, and the competencies acquired by professionals in the field of ESD are those that contribute to higher evaluation and thus greater opportunities for co-financing programs. In 2021/22, as a response to the importance of the ESD area, several priority topics have been announced for the area of sustainable development: education for sustainable development and active citizenship, ensuring equal opportunities for vulnerable groups and social emotional competences and well-being in education (empowering professionals to deal with mental health and addiction).

These include, among others, programmes in the field of safe and encouraging learning environment (*the project "Only Others Make Us What We Are" (2016–2021)*, *the project "Hand in hand for Help"*, *the project "Strengthening competences of professional staff in the field of managing an innovative educational institute in 2016 -2021"*, *the project "HAND IN HAND (Social and emotional skills for a non-discriminatory and inclusive community 2017-2020)*.

The ESD is not explicitly stated in the Catalogue of Knowledge Standards of the compulsory programme of the **National School of Leadership in Education - NSLE** (for the head examination); however, it includes various aspects important for the implementation of the ESD in kindergartens and schools (teamwork, problem learning, conflict resolution, school vision, action plans, etc.). A quick overview of other programmes does not reveal an explicitly stated area of ESD learning as a single entity either; however, important individual topics from the field of ESD are present.

- Tatjana Ažman, Mihaela Zavašnik, Frančiška Al-Mansour, Nives Cek, Tea Dolinar, Aleksander Jeršič, Ana Nuša Kern, Marina Kmet, Petra Korošec, Erna Meglič, Katarina Pajer Povh, Rok Pekolj, Barbara Žitnik Ternovec, Štefan Žun. 2019. Soustvarjanje inovativnih učnih okolij: primeri dobrih praks vodenja (Creating innovative learning environments: examples of good leadership practices): http://solazaravnatelje.si/wp-content/uploads/2019/12/SR_MRR_Prirocnik_zadnji_tisk.pdf
- Tatjana Ažman, Mihaela Zavašnik, Tatjana Blaži, Liana Cerar, Suzana Deutsch, Silvija Hajdinjak Prendl, Jelka Kitak, Petra Korošec, Natalija Kotar, Marjana Mastinšek Šuštar, Erna Meglič, Helena Ule, Barbara Žitnik Ternovec, Simona Žnidar. 2021. Soustvarjanje inovativnih učnih okolij: primeri dobrih praks vodenja. (v oblikovanju) / Co-creation of innovative learning environments: examples of good leadership practices. (The publication is expected to be published in 2021)

NSLE also provides non compulsory programmes for headteachers, middle management and teachers. In the programme Mreže ravnateljev za razvoj vodenja (Headteachers networks for leadership development) principals share good practices including environmental and wellbeing topics) and publish them every year. NSLE offers counseling to kindergartens and schools - principals and development teams on the topic of violence prevention in schools and kindergartens.

- Conference of the National Education Institute Slovenia "Global learning for encouraging sustainable development in education" (Ljubljana, 7 December 2018). Programme available at: https://www.zrss.si/zrss/wp-content/uploads/globalno-ucenje-za-spodbujanje-trajnostnega-razvoja-v-vzgoji-in-izobrazevanju_zadnji.pdf
- Professional training programme intended for school teams and individuals who would like to introduce various approaches to ESD at the school level and in their lessons. Students learn about the possibilities for a comprehensive, inter-disciplinary and systemic approach to introducing ESD at the school level. By means of theoretical starting points and exchange of experience, they learn about possible approaches to the planning of activities that combine various aspects of ESD in teaching and also as part of extracurricular activities. We present the connecting points between global learning and ESD and the importance of awareness-raising and taking measures to adapt to climate change and transition to low-carbon society. Available at: <https://paka3.mss.edus.si/Katis/ProgramPrijava.aspx?ID=4466&A=detailKP>
- 5th conference of teachers of natural science subjects – NAK 2019: "Education for present and future" (Laško, 23 and 24 October 2019). Section lectures: EDUCATION FOR SUSTAINABLE DEVELOPMENT (ESD). Available at: <https://nak2019.splet.arnes.si/program-sreda/>
- 4th conference of teachers of natural science subjects – NAK 2017: "I ask, explore and create" (Laško, 26 and 27 October 2017). Section lectures: EDUCATION FOR SUSTAINABLE DEVELOPMENT (ESD). Available at: <https://www.zrss.si/nak2017/program/>
- study groups for teachers of specific subjects, for example homeland and civic culture and ethics, biology, etc. with examples of themes that are included in EDS or GCED and expert support in online classrooms
- Conference "Sustainable mobility in EDS" (2017, 2018, 2019) <https://skupnost.sio.si/course/view.php?id=9477>.

- First National Forum on ESD and GCED (MIZŠ, MZZ, SLOGA in GENE, 2018)

Tertiary education:

Occasionally using a special questionnaire for students, the Faculty of Education UL checks their knowledge and skills in the field of ESD, as well as their views on the role of the future teacher in this field. /.../ SD principles. The Faculty of Education trains students of all study courses for this important comprehensive institutional and action approach to developing the necessary competences in the framework of the Eco-school programme implementation.

UL FF: V kurikulumu predmetov, ki so namenjeni strokovnemu izobraževanju in usposabljanju bodočih učiteljev, cilji GCED in ESD niso posebej omenjeni. So pa prisotni v številnih predmetih, predvsem s področja varstva okolja, ekološke geografije in didaktike.

UP PEF ne ponuja posebnih programov nadaljnega usposabljanja s področja GCED in ESD.

An ESD component is included in all **Centre for School and Outdoor Education (CŠOD)** teacher training programmes. They mainly provide training in outdoor learning pedagogy, and sustainability principles are an integral part of the process when learning and teaching in nature and with nature. CŠOD provides training through seminars, conferences and e-learning for all its 120+ pedagogical workers and more than 200 schoolteachers each year.

The Slovenian Network of Health Promoting Schools (SNHPS) has existed since 1993, after numerous expansions we already have 398 members (323 primary schools – 71% of all PS, 62 secondary schools, 10 student dormitories and 3 institutions for special needs). We meet with teachers at regional educational meetings three times a year, where we discuss current topics in the field of health promotion and a healthy lifestyle. Teachers are encouraged to incorporate contents into the curriculum and at various activities within school life.

In the last two years, education of teachers has focused on nutrition and physical activity, education on digital media, guidance for schools on how to take action on psychoactive addiction, stress management and goal setting for adolescents (program That's me!), etc.

More information about SNHPS (in Slovene language): <https://www.nijz.si/sl/slovenska-mreza-zdravih-sol>;

Kako izvajamo program? Poročilo za šolsko leto 2019/2020:

https://www.nijz.si/sites/www.nijz.si/files/uploaded/porocilo_zs_2019_2020_koncna_27_1_21.pdf

The programme Eco-Schools Slovenia develops and organizes education courses for teachers covering a broad range of topics and teaching techniques to support ESD and Global Education. Education courses include conferences, practical workshops on themes and topics as well as presentation of didactical tools and recommended approaches to successfully implement sustainable projects and activities. The knowledge sharing is encouraged through selection and exchange of best practices, being presented in the web-based platform Ekoskladovnica and Eco-Schools Slovenia website as well as in several manuals and other resources. Many resources also combine with practices from global network to provide teachers global perspective and possibilities on selected themes, skills and experiences. All resources are accessible and available to everybody.

ASPnet Slovenia / Slovenian UNESCO Schools

Given the fact that among the main tasks of mentors and coordinators in the ASP network is the realization of the goals of sustainable development (SDG, 4.7) in all areas of the 2030 Agenda for education at full school verticals, especially in the field of education for sustainable development (ESD) and in pursuing the goals of Global Citizenship Education (GCED), it is also in the interest of the individual UNESCO teacher to be educated on these topics.

What's more, the Slovenian ASPnet educates about intercultural dialogue and human rights as well as the ability to introduce transversal topics, such as equal opportunities for all, gender equality in sport, tolerance, acceptance of immigrants and the problems of aging - the problem of intergenerational cooperation.

For all these areas, institutions such as the Ministry of Education, the National Institute for Education, Educational Research Institute and National School for Leadership in Education are available, which enable individual professionals in the entire vertical of professional development in this field. For teachers who implement national ASPnet projects and for year-round coordination of work on the mentioned topics in their school / institution, the Ministry of Education recognizes this type of professional work, which they can apply for their promotion.

We want as many topics of the UNESCO ASP principles as possible to become the core curriculum of primary and secondary schools, which means that selected topics would be addressed within regular classes. Our goal is for all students of one school to deal with individual

topics, i.e., to establish conditions for whole-school projects at the school. The Slovenian ASP network is well on its way to implementing such set goals in the foreseeable future. All this requires the training of professionals. Fortunately, we have good experts for this, also in the school field. Guidelines for the idea of global citizenship, and even more so for sustainable development, have become an everyday topic in the field of economy (tourism, industry) as well as in the field of education. The more we integrate the topic into the everyday life of young people (also through education), the sooner and better the desired results will be shown.

Finally, we are guided by the implementation of the four Delors pillars in education for the 21st century through school projects, which is one of the main activities of the ASP of Slovenian schools.

Non-governmental organisations, including **SLOGA platform**, regularly have GCE trainings and workshops for educators. Each year a *national conference on GCE* is organized. In the last years *motivational days for teachers in GCE* were also organized. The project **Sustainable.Local.Global.** (2018-2020), consortium of 22 Slovene NGOs and coordinated by SLOGA Platform produced 36 *GCE monthly newsletters for educators*, including, among many other, informations on GCE and ESD training opportunities on national, EU and global level. Association Humanitas also runs **Club of global education teachers**, which won GENE Global Education Innovation Award 2018. Slovenian Association of Friends of Youth has a programme **Europe in School**, an annual competition that aims to familiarise children and young people with the European themes linked to the objectives of sustainable development. The competition encourages pupils and students to think outside the box about topics that reach beyond the borders of Slovenia.

C1b. Please provide examples of teacher training policies or curricula in which GCED and/or ESD are mainstreamed and, where possible, web links to relevant documents. If possible, include examples related to initial training and to continuing professional development.

ZRSŠ: For professional training, see C1a.

Catalogue of programmes for further education and training of professional workers in education. <https://paka3.mss.edus.si/katis/Uvodna.aspx>

CŠOD 2020 catalogue: <https://www.csod.si/stran/csod-kataloga-strokovnih-usposabljanj>

SNHPS integrate health promotion into curricular subjects which already include health topics. Besides, health promotion is integrated in several cross-curricular and non-curricular educational activities and projects. A combination of passive (such as one-way lectures) and active (such as group discussions, student investigation, action-oriented approaches and participatory co-creation activities) learning strategies are used to involve students while addressing health topics in schools. The major health promotion topics that are addressed, are: mental health, physical activities, healthy eating, COVID-19, ecology, smoking, alcohol, wellbeing, healthy life-style..

*C4 Please indicate whether teachers, trainers and educators are trained to teach the following dimensions of learning in GCED and ESD. Please enter the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
Knowledge	1	1	1	1
Skills	1	1	1	1
Values	1	1	1	1
Attitudes and behaviours	1	1	1	1

*C5 Please indicate whether teachers, trainers and educators are trained to use the following approaches to teach GCED and ESD in primary and secondary education by entering the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Global citizenship and education for sustainable development
GCED/ESD are taught as separate subject(s)	0
Cross curriculum approach (e.g. GCED/ESD are taught in more than one subject but not throughout the curriculum)	1
Integrated approach (e.g. GCED/ESD are taught throughout the whole curriculum)	1
Whole school approach (e.g. GCED/ESD are integrated in the school ethos, management, governance, curriculum, teacher training, teaching practices, the learning environment, and in learning experiences in the community and life outside school)	1

D. Student assessment (paras 4 and 5 of the 1974 Recommendation)

D1a. Please describe in which ways GCED and ESD are covered in student assessments and examinations. Indicate whether students are assessed only on their knowledge of and skills related to the topics being tested or also on their values, attitudes and/or behaviours.

Considering the objectives and standards of knowledge in individual syllabi, certain GCED and ESD content is included in regular assessment in individual subjects (compulsory and optional) and in external examination at the end of primary and secondary school.

Knowledge of certain GCED and ESD content and, somewhere, skills are also assessed.

Assessment is not made in the pre-school education period.

University of Ljubljana:

According to the Statue of University of Ljubljana, knowledge, skills and competences for each individual subject are examined and evaluated, in the manner determined by the study programme or in the curricula.

Diverse variety of assessments are used in classrooms to assess student knowledge and skills. Traditional forms of assessment (e.g. standardized tests and exams, seminars and presentations of practical and project work) are used, as well as formative (e.g. discussions, observations). Some other forms of assessment less often used include peer assessment, self-

assessment, and reflections.

Teachers also use classroom observations and project work to see learning and behavioral outcomes, and also use ad-hoc questionnaires to get additional information about values and attitudes toward sustainable development or ethical themes. Though this are usually not part of the formal assessment or grade but provide an opportunity to assess for example ability to communicate and collaborate with others (e.g. through project work), attitudes such as empathy and respect for others (e.g. through observations). Questionnaires are usually delivered anonymously, thus providing information about attitudes or behavioural changes (for a specific topic like sustainability) only for group or generation of students (not individuals).

University of Maribor: GCED and ESD are covered within student assessments and examinations within the study programmes/subjects oriented towards GCED and EST topics (aforementioned within 2b). Students are assessed mainly on their knowledge and skills related to the topics being tested.

Institute of the Republic of Slovenia for Vocational Education and Training:

ESD: 18 educational programmes in the field of VPE include sustainable development content as part of the compulsory professional module and is monitored and assessed (SQF 4 and SQF 5, EQF 4). "Special" programmes for the field of environmental protection and acting in accordance with sustainable development: Nature protection technician and Environmental protection technician at the level (SQF 5, EQF 4) and higher education study programmes Nature protection, Environmental protection and Bionics (SQF 6, EQF 5). Programmes from the field of energy, wood processing and construction in various programme units include content on environmental protection and sustainability, which is monitored and assessed.

GCED – another form of the educational segment Active citizenship is monitored and assessed with the marks passed/not passed (applied for all educational programmes).

ECO SCHOOLS:

Students assessment and examinations are covered within selected projects assessing, addressing mostly assessment of knowledge and values, attitudes and behaviors.

Programme Eco-Schools Slovenia is based on interdisciplinary approach an experiences-based learning with the purpose to increase knowledge, skills and competences, leadership in sustainability, innovation in sustainability, values and changes in behavior. To reach its goals, focus of the programme Eco-Schools Slovenia is promoting more systematic approach toward practical learning and outdoor education systematic experience and practical learning to understand challenges arising from everyday life in relation to sustainable development. SDGs will be included to plans and to the content on higher scale.

Each institution is processing its plans, implementation and control of its activities through the 7-step methodology of the programme Eco-Schools. 7 steps methodology is a process of work of individual institution to receive the Green flag, the internationally recognized label for sustainable education. 7-step methodology is a series of carefully engineered tools to help schools maximize the success of their Eco-School ambitions. The method involves a wide diversity of individual profiles from the school community - with students playing a primary role in the process as well.

Step 1: Form an Eco Committee. The Eco-Schools Committee is the driving force behind the Eco-Schools process and is representing ideas of the whole institution. It is formed of pupils / students and their mentors. At least one pupil from each year group on Eco-Committee ensures whole school involvement. An Eco-Committee is supported by an adult Eco-Coordinator, but led by pupils.

Step 2: Carry out an Environmental Review. Carrying out an environmental review allows schools to gain a realistic picture of their current environmental performance inside and outside

the classroom. The reviews are designed to be undertaken by the Eco-Committee and should enable pupils to see how well their school is performing across all ten Eco-Schools topics.

Step 3: Action Plan: The Action Plan is the core of the Eco-Schools work and is developed using the results of institution's Environmental Review.

Step 4: Curriculum Work. Besides increasing the status of the programme, Eco-Schools activities are encouraged to be linked to the existing curriculum, which provides opportunities to promote environmental awareness and understanding.

Step 5: Monitor and Evaluate. To find out whether or not you are successfully achieving the targets set out in your Action Plan, you must monitor and measure your progress.

Step 6: Inform and Involve. Getting everyone on board! Actions should not just be confined to the school: for example, pupils may also want to get involved with larger community environmental projects v in looking after the local environment.

Step 7: Prepare an Eco Code. A statement that represents the school's commitment to the environment, sustainable behaviour and education.

The Green Flag. Usually after two years of implementing the programme and reaching a high level of performance in complying with these seven steps (sometimes national mandatory criteria also applies), schools can then apply for and be awarded by the Green Flag label. Before receiving their first Green Flag, schools must be assessed by the national board /national coordinator / assistant. After the first Green Flag, the assessment is continuously performed by the national coordinator or level coordinator/responsibl supervisor coordinator. Assessment are carried out on a yearly basis.

A "whole institution approach" to SD/ESD is encouraged through the programme Eco-Schools Slovenia, informal education programme, the network of 717 Slovenian educational institutions (kindergartens, primary schools. high schools, extra-curriculum activities centres for outdoor education, residence halls for students and faculties). Projects and activities are based on several themes: waste, energy, water, food, sustainable mobility, biodiversity, school gardens, health and well-being and others, enabling interdisciplinary implementation. In past two years, more focus has been put to promote ESD and SDGs.

Programme Eco-Schools in Slovenia supports ESD and UNECE goals through following principles of work:

- an interdisciplinary approach – cross-curricular connection between natural sciences and sociological aspects of dealing with individual topics;
- a wholesome approach, which includes a complex dealing with environmental problems;
- arising from actual environmental problems in our own environment and connecting with problems from a wider surroundings;
- activities aimed at future and searching for alternative ideas keeping in mind the needs of future generations;
- active collaboration in democratic processes of environment decision-making;
- connecting emotional and ethical aspects,
- promoting global education issues.

The Eco-Schools programme is aiming to:

- Environmental education becomes part of every school subject's aims
- And contents;
- Identifying and solving environmental problems as a whole;
- Building national culture and self-confidence for young people;
- Improving relationships in schools and their surroundings;
- Environmental activities develop creativity, inventiveness, and form and
- Exchange new ideas among the young;
- Students take part in democratic decision-making to overcome
- Environmental problems at local as well as national level;
- Connecting the young from european and other countries;

- Establishing the system of formal and informal education and expanding
- The performance of the informal education;
- Supporting and performing pilot projects from the fields of education for sustainable education,
- Respecting and protecting biodiversity in local and global frame/level.

*D2 Please indicate whether the GCED and ESD themes below are generally included in student assessments or examinations at each level of education by entering the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
1. Cultural diversity and tolerance	99	1	1	1

E. Mainstreaming of GCED and ESD in laws and policies, curricula, teacher education and student assessment (paras 4-5, 7, 10-19 and 33-37 of the 1974 Recommendation)

*E1 Based on your responses to questions in the previous four sections (laws and policies, curricula, teacher education and student assessment) please indicate to what extent global citizenship education (GCED) and education for sustainable development (ESD) are mainstreamed⁵ in (a) education laws and policies, (b) curricula (c) teacher education (including the training of trainers and educators) and (d) student assessment in your country. Please enter the appropriate number in each white cell in the table below.

KEY:

0 Not at all

GCED and ESD are not mainstreamed.

1 Partially

Some GCED and/or ESD themes⁶ are mainstreamed. Select this option if GCED is mainstreamed but ESD is not (or vice versa).

2 Extensively

Most GCED and ESD themes are mainstreamed.

9 Not known

It is not known whether GCED and ESD are mainstreamed or not.

99 Not applicable

The given level of government does not have responsibility for the given component (policies, curricula, teacher education or student assessment) and/or does not have responsibility for the given level or type of education. This may occur at the national level in federal countries where education is the responsibility of individual states or at the sub-national level in small countries where there is only one level of government.

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
National				
(a) Education laws and policies	2	2	1	2
(b) Curricula	2	2	1	2
(c) Teacher education	2	1	1	2
(d) Student assessment	99	2	1	2
Sub-national				
(a) Education laws and policies	99	99	99	99
(b) Curricula	99	99	99	99
(c) Teacher education	99	99	99	99
(d) Student assessment	99	99	99	99

⁵ GCED and ESD are mainstreamed if their themes are mentioned explicitly in relevant documents and are expected to be implemented by the relevant authorities (e.g. Ministries, regional or local education authorities), educational institutions (e.g. schools, colleges and universities) and/or education professionals (e.g. teachers, lecturers, trainers and educators) as appropriate.

⁶ Refer to the schema in paragraph 11 of Section II of these guidelines.

F. Technical and vocational education and training (paras 25-29 of the 1974 Recommendation)

F1 Please describe any major initiatives that have been undertaken to promote GCED and/or ESD in technical and vocational education and training. Describe briefly the outcomes and impact of such initiatives and provide examples of good practices.

Eco Quiz with ESD content – materials for competitions

The system for the preparation of vocational and professional education programmes is based on vocational standards that determine and create the content of a professional qualification at a certain level of difficulty of work and define the required knowledge, skills and professional competences. In including sustainable development content in professional qualifications, we have developed with a group of experts an accessory, a matrix of key competences of sustainable development with descriptors. The matrix allows that various sets of sustainable development content - efficient use of resources, management of natural resources, space and the environment and social responsibility are included in a more structured manner. The matrix serves as an accessory in developing professional standards that are co-created by social partners and are the basis for developing educational programmes and, consequently, curriculum.

In some **vocational and technical educational programmes** (ISCED 35), these topics are more present than in others, for example in the fields of farming, food production, horticulture, forestry, beekeeping, tourism, hospitality industry, wood industry, nature conservation and media production. In recent years, these programmes have systematically included the competence for sustainable development in their occupational standards. In the future (no later than 2025), the competence should be included in all vocational and technical educational programmes. Priority themes in the field of SD in vocational and technical schools are often planned within the framework of what is called the open curriculum (20% of the entire curriculum), which is under the autonomous jurisdiction of the school, with the purpose of bringing the content and goals of education in a specific school closer to the local and regional needs of the economic, social and natural environments, thereby increasing opportunities for the employability of students in their home environment.

Educational programmes of higher vocational colleges (ISCED 55) are also modernized in terms of new and updated concepts, content, tools and competences in sustainable development. The renewed Starting Points for the Preparation of Higher Vocational Programmes from 2016 also include the requirement for a systematic integration of sustainable competence ("the capability to understand the relationship between development of production, social development and development of the environment, the creation of a global awareness of the possibilities, boundaries and threats of technological development", p. 5). Sustainable development with selected chapters in biology is, for example, a special subject within the following vocational and technical higher education programmes: horticulture, mechatronics, nature conservation, environmental protection, communal management of the countryside and landscape, and food and nutrition. Even at this level of education, the school itself defines part of the programme in cooperation with economic players from the local environment (the open curriculum).

CPI: vocational and technical education (VTE)

GCED themes: 124 educational programmes in the field of TVE include the contents of active citizenship within an independent subject:

- 74 programmes of secondary vocational education (SQF 4, EQF 4) and
- 50 programmes of secondary technical education (SQF 5, EQF 4).

ESD themes:

- The preparation of vocational and professional education programs is based on vocational standards, which determine and shape the content of vocational qualification at a certain level of complexity and define the necessary knowledge, skills and vocational competencies. All professional standards and, consequently, all secondary vocational and technical education programs include the goals and contents of sustainable development, such as: care for health and safety at work, development of entrepreneurial characteristics, environmental protection and social skills.
- Sustainable development goals are integrated into the professional part of all educational programs (Slovenian Qualifications Framework - SQF 3, SQF 4, SQF 5, SQF 6). Sustainable content was also given more emphasis in some general education subjects (science, biology, chemistry) (SQF 4, SQF 5).
- 8 educational programs in the field of biotechnology in VTE (agriculture, horticulture, forestry, food, veterinary, nature protection) include the contents of sustainable development within the independent compulsory professional module.
- Content related to sustainable development is also included in the programs of other professional fields (for example, construction, woodworking, energy) on the basis of professional standards.
- According to the needs of the economy in the environment, schools also include in their open curricula contents from the field of environmental protection (for example, in the field of alternative energy sources, energy management of buildings).
- "Special" programs for the field of environmental protection were also developed, namely Nature Conservation Technician and Environmental Protection Technician (SQF 5, EQF 4) at the level of secondary vocational education and higher education study programs Nature Conservation, Environmental Protection and Communal Services and Bionics (SQF 6, EQF 5).

G. Adult education (para 30 of the 1974 Recommendation)

- G1 Please describe any major initiatives that have been undertaken to promote GCED and/or ESD in adult education and other forms of non-formal education including youth education, out-of-school education, etc. Describe briefly the outcomes and impact of such initiatives and provide examples of good practices.

Slovenia was engaged in analytical work to promote GCED and ESD, in the frame of adult education, mainly in the field of non-formal education and learning. The outcome are promotional events (for example 29 Slovenian events at ESD Week), bibliography in professional journals including few at the research level, rich in 2018 (e.g. contributions for ESREA conference, journal South-east European forestry and international conferences on local response to extreme events). Below we present some valuable initiatives that have been launched in the country in recent times.

In Slovenia, there is a sound partnership with the SLOGA platform of non-governmental organizations (NGO), which work in the field of international development cooperation, global education and humanitarian aid. The aim of the platform is to connect and strengthen the partnerships among Slovenian NGOs, which are active and/or are raising awareness of Slovenian and European public about uneven distribution of global wealth and subsequent significance of global solidarity and interdependence.

The link between our institutions has taken place via different projects, for example the Slovenian Lifelong Learning Weeks and Bridge 47. SIAE acts as the national and SLOGA as the thematic coordinator of several events that call attention to the close link between formal, non-formal and informal adult education and learning and the subsequent attainment of SDGs.

In 2020 alone SLOGA organized two trainings on global education for Slovenian Lifelong Learning Weeks coordinators.

A recent example of cooperation is the 20 January 2021 joint conference on the topic of education and learning for an inclusive multi-cultural society (see link to the event website in Slovenian <https://epuo.acs.si/dejavnosti/forumi/migracije>). The conference consisted of three strands – two on arrangements for children and youth migrants and one on adult migrants. One of the key findings is that this topic is not only multi-cultural but also multi-generational. And the efficient way of handling it is to create safe supportive environments for children and adults concerning awareness-raising, guidance and outreach, education and learning, validation of prior knowledge and skills and other, sometimes even therapeutic services.

The next initiative developed at Slovenian Institute for Adult Education (SIAE) is education training for teachers of Slovenian language, who intend to teach in programme called Initial Integration of Immigrants, and cultural mediators, who intend to participate with them in this programme as well. Integration programme Initial Integration of Immigrants is a free programme for learning the Slovenian language, which also includes learning about Slovenian society. The programme targets both migrants and beneficiaries of international protection. Third-country nationals are eligible to attend these courses. Courses are comprised by 180 or 60 + 120 hours of learning, depending on the residence permit they have. The costs of programme are covered by the Ministry of the Interior and the European Asylum, Migration and Integration Fund (AMIF). After successfully completing the programme, participants have the opportunity to apply for the exam of the Slovenian language on the basic level. For the first time they have the exam for free.

In the context of the promotion of GCED and / or ESD, the role of study circles in Slovenia should not be overlooked. Study circles are small groups of adults for non-formal learning, that are important for local and personal development and have attracted adults all across Slovenia since 1993. They are the perfect opportunity for active involvement for those who have difficulties accessing education but do not want to stay passive. They are designed not only for learning, but also for achieving certain goals that are beneficial for the local environment and beyond. Their primary goal is not to promote GCED and / or ESD in adult education, but they certainly contribute to this through their content.

Some valuable projects, programs, and initiatives in the country (e.g. Know your lifestyle) that have already been completed, due to lack of financial support and short-term priorities, have not been extended. However, we hope that we will be able to implement some of them in the becoming period and in cooperation with partners at local, national and international levels.

SLOGA is also active on EU level for Global Education. In the last years, mainly through EU-funded project [Bridge 4.7](#). Within the project, the '[Envision 4.7 Policy Paper on Lifelong Learning](#)' was prepared, outlining how the European Commission's six policy priorities for 2019-2024 (the Green Deal, Future of Europe, Digital Education Plan, A Strong Social Europe for Just Transition, European Education Area and New European Consensus on Development) all stand to benefit from the inclusion and implementation of SDG Target 4.7, which focuses on transformative education. This is life-long and value-based learning, designed to promote global citizenship, sustainable development, human rights and gender equality.

H. Research and International Co-operation (paras 41-45 of the 1974 Recommendation)

- H1 Please describe what kinds of research or experimentation have been carried out to improve the implementation of GCED and/or ESD. Describe briefly how the results of such activities have influenced education policies, curricula and/or teaching practices.

Education for sustainable development (ESD). In this field, certain analyses were conducted recently (2017-2019) on the state of inclusion of ESD content in the educational work in kindergartens and schools by the National Education Institute, on the achievements of students from the aspect of ESD content in the international surveys ICCS, PISA and TIMSS (performed by Educational Research Institute), while then first national forum on global education (GE) and ESD was organised in May 2018 in cooperation with the Ministry of Foreign Affairs and the Global Education European Network (GENE), which welcomed the integration of these fields of education (GE and ESD). When it comes to ESD and GE in connection with civic education, the Ministry for education, science and sport is planning two measures for the 2020-2022 period: 1) updating the existing national guidelines for ESD (2007) and 2) appointing an inter-sectoral and multi-stakeholder coordinating group in this special field (both objectives are also written down in the latest national Strategy for international development cooperation and humanitarian aid, the Ministry of Foreign Affairs, and the National Environment Protection Programme until 2030, the Ministry of the Environment and Spatial Planning).

There were two partial analyses of the National Education Institute Slovenia on the integration of ESD into the curriculum and daily life of the educational institution as a whole. Both analyses were carried out on a small (unrepresentative) sample of kindergartens and schools. The first was carried out in school year 2016/2017 as a project assignment **"Knowledge and competences important for achieving the objectives of the green economy in relation to climate change at the level of pre-school education, primary school and general secondary schools"** and was financed by the MESP. The second partial analysis **"The analysis of examples of activities which support SD and GE"** (as a part of the broader *Mapping of GE and ESD in Slovenia* was carried out with the support of GENE in school year 2018/2019. (At the moment the concluding report is in the final stage of preparation.) Both analyses show that the whole-school approach in kindergartens and schools has not been yet fully implemented; in the final evaluation, both analyses include the whole-school approach among priority areas for further work. The final report of the aforementioned project assignment, including the recommendations for kindergartens and schools, is published on the website of the NEIS web site for ESD: <https://skupnost.sio.si/enrol/index.php?id=8652>.

SLOGA has published a [report](#) on the state Global Citizenship Education in Slovenia with the purpose of illustrating the importance of GCE at a national and local level for key stakeholders. Following an analysis of GCE in Slovenia conducted from June to September in 2019, the report presents an overview of local, national and European GCE policies, and a review of relevant national and foreign documents. The concept of GCE is also explored in comparison to other relevant topics in Slovenia, such as Education for Sustainable Development and Education for Global Citizenship. This report offers several recommendations for key stakeholders, which will serve as a starting point for further discussion, and the national presentation of the report with a round table discussion will take place on the 6th February 2019. The analysis was prepared by Jana Arbeiter from the Centre of International Relations (CIR) - Sloga's GCE partner within the Bridge 47 project - at the Faculty of Social Sciences at the University of Ljubljana.

The National Forum on GE and ESD (May 2018) showed the need for a (re)conceptualisation of ESD in the direction of a clearer connection (or demarcation) between similar concepts, especially GE and civic education, and for a closer connection with SDGs and a further detailed elaboration of ESD implementation in the curriculum and everyday life of kindergarten and school. The next National Forum is expected to take place in 2022.

The call for Targeted Research Programs for 2021 (Research Agency of the Republic of Slovenia) is being prepared, which will include a development project on sustainable school architecture with the aim of supporting the implementation of a comprehensive institutional approach to ESD in kindergarten and school.

The **Slovenian Institute of Adult Education (ACS)**: Lack of research, experimentation and training on fields of concern is huge. However, the driver of its development is strong interest of institutions and individuals, reflected in raising demand for counselling and engagement in project based or educational activities organized by research and civil society institutions.

The **National School of Leadership in Education (NSLE)**: The project of raising social and cultural capital in local communities for the development of equal opportunities and the promotion of social inclusion - SKK took place under the leadership of NSLE from 2013 to 2015.

In this context, many good practices have emerged that have made students aware of environmental protection, waste separation, excessive consumption, etc.

- Ažman, T., L. Avguštin in S. Čagran. 2015. Skupno poročilo o izvajanju projekta Dvig socialnega in kulturnega kapitala v lokalnih skupnostih za razvoj enakih možnosti in spodbujanje socialne vključenosti 2013-2015. Ljubljana: Šola za ravnatelje. [PDF](#)

NSLE was a partner in LELENET project (<https://lelenet.net/>) 2017-2020. The main objectives of the project were:

1. to develop competencies of headteachers of primary schools (ISCED 1,2) for managing professional networks of teachers focused (not only) on the area of diversity management at schools and building a culture of networking at schools,
2. to develop competencies of the trainers of headteachers in the educational topic of professional networks by creating the training modules,
3. to promote a cooperation and exchange of experience among the participating headteachers and their educators and indirectly also the support of the quality of teaching and diversity management at schools.

NSLE is a partner in the project Empowering school principals for inclusive school cultures. ERASMUS+ training programme for primary and secondary school principals in Croatia and North Macedonia (2019-2021).

The main aim is to empower school principals for inclusive school cultures, by:

- Conceptualizing inclusion, school culture, leadership role (professional self-understanding)
- Defining leadership challenges and skills for building inclusive school cultures
- Addressing specific school contexts proactively - Intervening

As part of international and intercultural cooperation, interviews were conducted in 2020/2021 with principals from Germany, Sweden, Norway, the Netherlands and Belgium: <http://solazaravnatelje.si/index.php/dejavnosti/mednarodna-dejavnost/mednarodne-konference>

From 2017 to 2020, NSLE carried out several visits by headmasters to other countries (Scotland, Belgium, Iceland, Ireland, Sweden, Germany, Italy. It hosted a Serbian, Austrian and Croatian delegation: <http://solazaravnatelje.si/index.php/dejavnosti/mednarodna-dejavnost/mednarodne-konference>

University of Ljubljana: Several different researches have been carried out to better understand, develop and implement GCED and/or ESD themes in HE. They cover all sustainability dimensions (social, environmental, economic): **projects** (e.g. [Design of Sustainable and Energy Self-Sufficient Processes Based on Renewable Resources](#), [In search of sustainable and responsible consumption \(SRC\)](#)), **research programmes** (e.g. [Sustainable planning for the quality living space](#), [Challenges of inclusive sustainable development in the predominant paradigm of economic and business sciences](#), [Advanced Manufacturing Technologies for High Quality and Sustainable Production](#)) and **international projects** (e.g. [Gender Equality Actions in Research Institutions to transform Gender ROLES](#), [Gender and health impacts of policies extending working life in western countries](#), [Learning Together to Live Together: Teachers Leading Ethical Education for an Inclusive Society](#), [CONSUMER Energy Efficiency Decision Making](#)). Empirical results of research projects, case studies developed and best practices learned were used in the study process, disseminated through events (workshops, round tables, special seminars) and included in curriculum to present up-to date knowledge and cases. Below, we additionally describe how the results of activities can be included in education through two international projects where University of Ljubljana was or still is included as a partner.

Project 1 (EUTOPIA, <https://eutopia-university.eu/>): The Eutopia inclusion action is an innovative and challenge-driven initiative, including the mission to promote and ensure that higher education is inclusive and accessible to all students. The project's main principle is to provide learning opportunities for all groups of students and especially those who are disadvantaged because of their sex, race, ethnicity, immigrant background, economic status, disability, and so on. The project seeks to achieve two goals: develop recommendations and initiatives promoting equality and inclusion for the disadvantaged groups, and jointly build expertise on how the European principles of openness and inclusion could be applied to all European regions, including the Western Balkans, especially in connection with education.

Project 2 (LITTLE, <http://ethicaleducation.eu/home.htm>): The partnership "Learning Together to Live Together: Teachers Leading Ethical Education for an Inclusive Society" was formed to build the competences of teachers in primary and post primary schools in Ethical Education to contribute to the achievement of the Union's vision for an education which promotes common values of freedom, tolerance and non-discrimination, helping young people become responsible, open-minded and active members of society. The specific objectives of the project were: 1) To promote innovative practices in school education in the field of Ethical Education through methodologies and pedagogies which support students' social, civic and intercultural competencies through an online interactive course 2) To build the confidence of teachers to examine ethical issues in their own subject areas through guidance on how to develop teacher and student created ethical education content 3) To raise awareness of Ethical Education amongst politicians and policy makers. Outcomes: development of an online Ethical Education methodologies course, Teachers Guide on the development of subject specific resources in the area of Ethical Education and the process of co-creating content with students, two five day teaching and learning events, and a series of 12 interactive workshops (multiplier events), communicating project results and working through methodologies and processes advocated for in the online course.

University of Maribor: Research and experimentation towards implementation of GCED and ESD is mainly carried out within the research fields and study programmes oriented towards GCED and EST topics (aforementioned within 1b); specific data is not gathered on the institutional level. The results of research is embedded within the curricula as a standard.

Slovenia has been active member of Schools for Health in Europe Network Foundation (SHE) since 1993 and has been following their guidelines in the field of health promotion in the school environment, attending meetings and using their materials (adopted to Slovene situation), more information is here: <https://www.schoolsforhealth.org/>

University of Primorska: In the field of ESD and GCED, the University of Primorska participates in the following projects:

1. Preservation of the living environment: education in the community: Comparative analysis between the Republic of Slovenia and Bosnia and Herzegovina (Theoretical framework consists of the concepts of sustainable development and community education. All educational and other organizations in an environment constitute a common learning environment. The research is based on the role of different actors in forming and transforming ecological awareness). ecological consciousness) and practices of residents of different generations in the local environment.
2. Strengthening the competence of entrepreneurship and promoting a flexible transition between education and the environment in primary schools – POGUM (Courage): In the project POGUM/COURAGE, which means "Strengthening the competence of entrepreneurship and promoting flexible transition between education and environment in primary schools", we will promote the way of thinking and understanding entrepreneurship in primary schools as the ability to develop creativity, innovation and proactivity of the individual and groups.
3. React! You are not alone 2020. The project is intended to inform and raise awareness of future pedagogical workers, pedagogical workers of the University of Primorska and other general public about various forms of violence, preventive practices, procedures and cooperation with external institutions, organizations, associations, etc. (Police, social work centers, Society for Nonviolent Communication, SOS Hotline for Women and Children - Victims of Violence, etc.).

The Seeds of Change (2017/2018) was a developmental pilot project of the Government Office for Development and European Cohesion Policy (GODC), whose primary objective was to encourage primary schools (with teachers and pupils of the 5th grade participating as a rule) to become the bearers of change ("seeds of change"). They are encouraged to think about the future of education and life and to implement sustainable values, written in the Vision of Slovenia 2050.

Children's Parliament is a public debate of children on a theme chosen by primary school pupils at National Children's Parliament. Children's Parliament is a programme for the education of children and adolescents for democracy. As a form of democratic dialogue and cooperation, it is implemented in primary schools throughout Slovenia.

Projects of UNESCO Schools (ASPnet) in Slovenia. www.aspnet.si

Tasks of schools in the UNESCO ASPnet for the period 2017-2020 were: 1. achieving the Sustainable Development Goals (SDGs) in all areas of the 2030 Agenda for Education throughout the school vertical; 2. incorporate UNESCO themes into the regular curriculum of primary and secondary schools: peace and human rights, democracy, gender equality, global problems and the role of the UN in solving them, education for sustainable development, global learning, environmental protection, intercultural learning, promotion of creativity, intercultural dialogue, cultural heritage, global citizenship education.

The main regular annual activities of ASPnet in Slovenia were the following: the annual meeting of the regional coordinators for the preparation of the annual plan; the main annual event of UNESCO Associated Schools in Slovenia: a meeting of pupils and students of all UNESCO ASP schools in the network (on the occasion of the Human Rights Day or the International Day of Peace); an annual seminar for mentors, principals and coordinators of UNESCO associated schools; cooperation between UNESCO schools at national level through [projects](#) (approx. 50 projects per year) and other activities; a printed annual report on implemented projects.

Projects of the Eco Schools programme in Slovenia. After 2015, with the adoption of the Agenda 2030, these projects are explicitly linked to SDGs. The programme's website is extremely rich, where all projects, tenders, reports, teaching and learning materials are published; since school year 2017/2018, also the collection of examples of good practice in the field of environmental education and ESD ("eco-stack"), available at the Ecoportal of the Eco School programme: <https://eko-portal.si/home>. From the viewpoint of informing and awareness-raising of the general public, we should especially mention the daily "News" (<https://ekosola.si/novice/>), and since 2015 also the monthly "Eco-school paper", the online newsletter of the Eco School programme (<https://ekosola.si/ekosolski-list-spletno-glasilo-programa-ekosola/>). Vsakoletni nabor projektov, ki jih izbirajo mentorji na vsej pedagoški vertikali vsebuje tematsko vezane vsebinske koncepte VITR- dostopno na spletni strain Ekošole, v ekoakcijskih pregledih, za katere smo zelo razširili nabor možnih vsebin.

The Slovenian network of healthy schools for promotion and awareness of health in the school environment celebrated its 25th anniversary in 2018. It is coordinated by the National Institute of Public Health. In 2016/2017, 375 primary and secondary schools, secondary schools' residential facilities and schools for children with special needs participated in the healthy schools network. "Healthy schools" participate in several programmes aimed at learning and raising awareness about healthy eating habits, healthy lifestyles, environmental protection and ecology, intergenerational cooperation, and in the last period (2016/2017, 2017/2018), a large part of programmes aimed at protecting mental health and emphasized care for regular physical activity. Lately, the healthy schools programme has been more closely defined by the principles and goals of sustainable development (Agenda 2030).

There are many more projects, eg. The project "Sustainable.Local.Global" (2018-2020) is also run by the SLOGA platform and financed by the Ministry of Foreign Affairs.

In the field of informal adult education (according to SIAE and MESP), we should single out at least three important projects aimed at raising awareness, promotion and empowerment for changes towards SD: 1) regulary once a year »Education for sustainability week« (2018) (financed by MESS): <https://www.esdw.eu/events/studijski-krozk-v-slovenskem-prostoru-slovenian-study-circles-2/> , 2) »Implementation of an adult training programme for sustainable development and transition to the green economy in relation to climate change«, SIAE, 2016-2017, financed by the Climate Change Fund, MESP and 3) the international project, in which Slovenia was participated (2015-2018), »Cooperation for innovative approach in sustainable forest management training – CIA2SFM«, financed by EC/Erasmus+ (more on project available at: <https://www.acs.si/projekti/mednarodni/cia2sfm/>).

In the field of ESD, the **Centre for School and Outdoor Education (CŠOD)** is a member of the largest European network of outdoor learning teachers, researchers and other practitioners, the EOE Network (European Institute for Outdoor Adventure Education and Experiential Learning). Since 2018, a representative of CŠOD has been the chair of this

network and CŠOD is a very active member. The EOE Network annual international conference of 2018 was held in Slovenia and organised by CŠOD.

In 2020, Slovenia joined the international GLOBE program (Global Learning and Observations to Benefit the Environment) and thus established a cooperation with NASA (National Aeronautics and Space Administration of the United States of America). CŠOD has been selected as the national coordinator for Slovenia and will begin with the implementation of this global ESD programme in 2021.

CŠOD has also coordinated and participated in numerous international projects and strategic partnerships, mainly through the Erasmus+ programme, that include a focus on ESD. These include, among others, international mobilities of teachers and learners, exchange of good practices between institutions and the creation of new pedagogical approaches for outdoor learning that include an ESD component.

Another CŠOD field of international cooperation are activities for children of different nationalities with the aim of getting to know other cultures. These activities last several days and are primarily focused on embracing cultural diversity through getting to know new facts about other cultures as well as spending time and collaborating with people from other cultures.

In the fields of cultural diversity and tolerance as well as human rights, Slovenia has had a strategy in place for the education of the Roma minority since 2004. Throughout 2017-2020 this strategy has been implemented through a national project of support to educational processes for Roma children – Together for knowledge – carried out by the Centre for School and Outdoor Education (CŠOD). Co-funded by the European Social Fund and the Republic of Slovenia, this project reaches a majority of Roma children in Slovenia with supporting activities in school as well as in their settlements. In addition to learning support, the project aims to bridge the gap between the minority and majority populations through promoting tolerance and understanding by exploring both cultures, sharing views and forming common values. The experience obtained during the project has informed the development of a revised strategy of Roma education in Slovenia, as well as the national plan of measures tied to the Roma community.

A thematic Eurydice Network study entitled *Citizenship Education in Schools in Europe - 2017* was published in November 2017 (EC/EACEA/Eurydice, 2017. Eurydice Report. Luxembourg: Publications Office EU), which also included Slovenia. With regard to the inclusion of individual dimensions of civic education, the analysis of the curricula of European countries shows that in general the ecological dimension ("environmental protection") in the curriculum is included more often than the area of "sustainable development". **Slovenia** is classified in the group of countries or education systems whose curriculum includes a "relatively more specialised topic of sustainable development" (p. 65).

H2 Please indicate which types of activities are available that promote international co-operation at each level of education by entering the appropriate number in each white cell.

KEY: 0 = no, 1 = yes, 9 = unknown

	Pre-primary	Primary and secondary	Tertiary	Non-formal education
Hosting of international meetings on GCED and/or ESD	1	1	1	1
Participation in international meetings abroad on GCED and/or ESD	1	1	1	1
Support for programmes hosting foreign students, researchers and/or teachers	1	1	1	1
Membership of international networks including ASPnet	1	1	1	1
Joint research projects on GCED and/or ESD with foreign institutions	1	1	1	1
Other activities (please specify):				

I. Any other comments

I1 Please indicate whether your country has faced any constraints, in particular related to global or national crises, including natural disasters, in implementing the 1974 Recommendation during the reporting period.

To speed up development and activities, research investments are needed to improve understanding of interactions and integrations, hardly described with simplified indicators. There is another issue to be reconsidered - international research and latest documents (e.g. UIL, 2020) supported another direction of ESD development – more attention, recognition and support to the local level (and less to GCED top-down approach). This also calls for further exploration, resulting in integration of both perspectives and also of multifunctional resource use, sharing and innovation in education.

- Covid19 pandemic crises

I2 Please provide any other relevant information or clarifications regarding the implementation of the 1974 Recommendation or the mainstreaming of GCED and ESD in your country's education system.

A special topic in the field of ESD at all levels of education is (from kindergartens to upper secondary schools) the development of **spatial literacy** in terms of sustainable development, addressing school buildings in the context of sustainable construction and sustainable development. For this purpose, *Playful architecture: a manual for education on the built environment* (NEIS, 2013) was prepared for kindergartens and schools, representing a basic tool for educating professional staff for teaching and developing spatial literacy in pupils – including in terms of sustainable values and principles. The MESS occasionally organizes conferences, seminars, consultations, etc. for teachers and principals on the topic of **sustainable school architecture** (in 2009, in cooperation with the OECD, the "Sustainable architecture of kindergartens and schools" international conference, the 2014 national seminar "Architecture

and the Construction of Kindergartens", in the spring of 2018 an interdisciplinary seminar on the criteria of high-quality/sustainable architecture of kindergartens and schools); the ministry also finances multiannual R&D projects on school architecture and sustainable development, e.g. "Architecture of the School Space in the Function of the Hidden Curriculum" (2010-2012). The research project "Situation analysis of the architecture of public kindergartens and schools in Slovenia - recording, evaluation and protection of cases of high-quality (sustainable) architectural practice" followed (2017-2019).

As already mentioned, the CRP 2021 call is being prepared, which includes a development project on the topic of supporting the comprehensive institutional approach to ESD in kindergarten and school through the creation of a sustainable school architecture. At the end of 2019, the first national conference was organized: *Modernizing the physical learning space from the point of view of modernizing pedagogical work and ESD* (organized by ZRSŠ).

The CPI created the manual "**Thinking and Acting Sustainably**", which is intended for professional staff for including sustainable development content in education. More about this at: <https://cpi.si/poklicno-izobrazevanje/izvajanje-izobrazevalnih-programov/> - Education for sustainable development. An updated reissue of this handbook is planned as part of the already mentioned Climate Objectives and Content in Education project (2021-2023).

The CPI implemented and is still implementing certain projects that include sustainable development activities and content:

- **SKILLME, 01.11.2014 – 31.10.2017**, SkillMe It is a collaborative project between vocational education and training (VET) providers, national regulatory partners and representatives of the metal and electro industries of the EU member states Croatia, Latvia, Slovakia and Slovenia, which aims at identifying the most endemic skill gaps in the metal and electro industries and at developing state-of-the-art curricula to fill those gaps in order to ensure sustainable development of the European metal and electro markets. More on <https://www.gzs.si/skill-me/>
- **ECOSIGN, 01.11.2015 – 31.10.2018**, Ecosign project main goal was to allow industrial designers to reduce environmental impact during the product life-cycle from the earliest stage of design, including the use of raw materials and natural resources, manufacturing, packaging, transport, disposal and recycling, avoiding the risk of uncoordinated product planning that could lead to a negative impact for the environment (for example, eliminating a toxic substance should not lead to higher energy consumption).
- **ECOFAR, 01.10.2018 – 31.03.2021**, Ecofar project aims towards the development of managerial and entrepreneurial skills of young eco-farmers via joint VET curricula, enhanced qualification profile, assessment standard and sustainable cooperation synergies.

Association for Environmental Education FEE-Slovenia/int. Eco-Schools program: Syllabi need to be more flexible in adapting to changes in the environment; young people need to be equipped with knowledge and skills and have an eco-centric environmental and ethical stance so that they will be competent in the coming years of major social and environmental changes caused by the growing environmental crisis and climate change.

ESD content should become a constant on the entire vertical and horizontal scales, and an in-depth and broad cross-curricular approach to complement the topical content is needed; with the principles of systematic, critical and creative thinking about sustainable development.

With its content and sustainability- and globally-oriented concepts in terms of methodology, the Eco School is a reliable and credible partner in the educational network, as it is present in 717 educational institutions, and associates 8,600 teachers-mentors and 100,000 students on the entire vertical scale.

The programme Eco School - environmental education is being improved and supplemented with educational fields that touch on economic and social issues; we are also getting connected

with companies with sustainable development concepts and, by doing so, realising the principle of integration of ESD elements (connecting environmental, economic and social issues).

We are promoting the principle of responsible conduct towards oneself and the social and natural environment, as ESD demands a responsible attitude of an individual towards themselves, fellow human beings and nature.

Becoming increasingly important is the principle of treating sustainable development from the aspect of ethical dimensions, including the issue of equality, solidarity and mutual dependence between members of one generation and between different generations;

We make sure that our projects and activities contain a diverse range of themes and content, with which we encourage students to think about sustainable development systematically, critically and creatively: the fundamental condition for sustainable development measures should be encouraging children/students at all levels to think systematically and critically on the local, regional, national and global scales;

Eco School is also establishing international connections with the EU member states that have similar ESD approaches and, by doing so, implements the ESD partnership principle at the local, regional, national and international levels: ESD would need to take into account the different local, regional, national and international conditions and the global framework, and pursue a balance between different interests.

The **EU DEAR-programme** is providing valuable support for national GCED projects in Slovenia, such as [Bridge 47](#). The project is dedicated to work with creating more space for GCED and ESD in the 12 countries that are partners. Bridge 47 brings people together to share and learn from each other and mobilises civil society from all around the world to do their part in creating a more fair, peaceful and equitable world with the help of Global Citizenship Education. One of the major achievements is the conference Envision 4.7 in 2019 where 200 participants created a [Roadmap for SDG target 4.7](#) with recommendations for both national and European government because this target is seen as crucial for achieving the Agenda 2030. Representatives (governmental and non-governmental) from Slovenia were actively involved in the process, SLOGA is implementing follow-up activities on national and EU level, including during Slovenian Presidency of the Council of the EU (july –december 2021). The 'Envision 4.7 Policy Papers' were also produced, outlining how the European Commission's six policy priorities for 2019-2024 - the Green Deal, Future of Europe, Digital Education Plan, A Strong Social Europe for Just Transition, European Education Area and New European Consensus on Development - all stand to benefit from the inclusion and implementation of SDG Target 4.7, which focuses on transformative education. This is life-long and value-based learning, designed to promote global citizenship, sustainable development, human rights and gender equality. The Envision 4.7 Policy Papers build on the six policy recommendations listed in the Envision 4.7 Roadmap:

- [Transformative Education](#)
- [Cross-sectorial Cooperation](#)
- [Indicators for SDG Target 4.7](#)
- [Lifelong Learning](#)
- [Competencies for SDG Target 4.7](#)
- [Resources for SDG Target 4.7](#)

SLOGA is also an active member of the Bridge 47 network, which mobilises civil society from around the world to contribute to the implementation of SDG target 4.7 (covers both GCED and ESD). Members of the Bridge 47 networks are also some individuals and NGOs from Slovenia.

On national level, important source of funding for the NGO is the **co-funding mechanism for EU projects from Ministry of Foreign Affairs** in the field of development cooperation, humanitarian aid and global education. MFA funds the co-funding NGOs part (own resources). Similar model was later introduced also by Ministry of interior, but the scope of co-financed NGO project is wider (and includes GCE and ESD EU-funded NGO projects). Some GCE activities in the past were also funded by the Government Communication Office.

Slovenia also actively participates in the **Global Education Network Europe (GENE)** from 2004. Over the past years, GENE has provided an incentive for active cross-ministerial cooperation (Ministry for Foreign Affairs, Ministry for Education, National Education Institute) and cooperation with non-governmental sector (SLOGA Platform) to discuss and develop global education policies and practices. It also provided funding for some activities, such as GCE and ESD national forum and project "Global responsibility for the future" (including GE and ESD related topics to entrepreneurial clubs for youth, implemented by NGOs).
